Phoenix Weekly Release 0.0.0.2398

Phoenix Online DPMS

Weekly Release

Build 0.0.0.2398 | August 31st, 2018

These are the highlights of the changes available in this week's Phoenix DPMS release. It should be noted that this week's release contains several Voice of Customer items that deliver on recent requests from customers that are actively using Phoenix to operate their practices.

Optimizations and Fixes

The following fixes and optimizations have been added to Phoenix this week.

1. Addressed a bug in the batch claim file generation that would sometimes create issues when the Billing Provider and the Treating Provider have different entity information (e.g., NPI number and type and TIN).
2. Insurance estimation information has now been added to the Treatment Plan printout that is generated and shared with patients to provide clearer information

on the estimated cost breakdown for proposed treatment.

3. Fixed a defect in the Insurance Plan functionality that prevented users from searching for an selecting an existing plan to import its Allowance Table details to save time when defining coverage rules for a new insurance plan.
4. Resolved an issue in the Treatment Plan functionality that would sometimes prevent procedure details to display on the Treatment Plan printout.
5. Fixed a bug with the Insurance Estimation functionality which prevented the calculated insurance estimation value from being displayed for procedures added to a patient Treatment Plan.
6. Addressed a general defect in the sorting mechanism for tabular data which prevented users from sorting and resorting data presented in tables (e.g., Pending List appointments).
7. Resolved a minor bug in the Insurance Plan UI that was not accurately reflecting the presence of saved Allowance Table coverage rules for a plan.
8. Fixed a defect in the Treatment Plan List UI which was preventing the display of the next (scheduled) appointment information when it exists.
9. Addressed an issue in the Provider Schedule Planning functionality in which new provider working hours were sometimes linked to the defined working hours for an existing provider rather than be automatically set with default hours.
