Phoenix Weekly Release 0.0.0.2454

Phoenix Online DPMS

Weekly Release

Build 0.0.0.2454 | September 21st, 2018

These are the highlights of the changes available in this week's Phoenix DPMS release. It should be noted that this week's release contains several Voice of Customer items that deliver on recent requests from customers that are actively using Phoenix to operate their practices.

Phoenix in the UK

This past week, several of the US-based team members traveled to England to really kick-start the expansion of Phoenix in the UK. Aside from discussing various UK market requirements and drivers (for example, support for NHS

integration), the team attended several customer events. While attending the Digital

Dentistry Show over the weekend, Phoenix was well-received by the show attendees, resulting in several Beta agreements for UK dentists to start testing Phoenix in their practices. Throughout the week, the team also participated in a few other customer events that resulted in some additional potential Beta customers as well as providing VOC vital to understanding how Phoenix can support the UK dental market. This is an exciting time for the Phoenix program as we are working to actively expand the reach of our product.

Optimizations and Fixes

The following fixes and optimizations have been added to Phoenix this week.

1. Resolved a bug that was preventing the search from reindexing when the defined locale does not match the database.
2. Fixed a defect that was resulting in a console error when a Team Member was set to inactive status.
3. Addressed a minor UI alignment issue in the Patient Treatment Plan screen that occurs when procedures with long Office Descriptions are added to the plan.
4. Fixed a minor bug that was displaying an invalid character in the Financial Activity KPI module in the Location Homepage when no previous data existed for a month in view.
5. Solved a technical issue that was causing a timeout on the backend for certain operations.
6. Resolved a minor UI alignment issue with the Schedule / Day View in which the main date display was getting truncated when the date string is too long.
7. Fixed a small bug in the UK localization of the Procedure List and Fee Schedule UI in which the incorrect currency symbol was being used for the locale.
8. Addressed a defect that was producing an error when trying to print selected procedures from a patient's Treatment Plan.
9. Addressed a categorization issue for a CDT code that was resulting in the assignment of an incorrect anatomy requirement.
10. Resolved an issue with the patient's Treatment Plan that was preventing an automatic refresh when updates are made.
11. Fixed a technical defect in which a backend error was preventing the creation of new records under certain conditions.
12. Resolved an issue in which the status of the procedures in a patient's Treatment Plan was not being accurately reflected when appointments are completed.
13. Fixed a defect in the claim file generation logic in which the associated quadrant value specified for applicable procedures was not getting included in the file.
14. Addressed a defect in the insurance claim file in which an additional delimiting character was getting added to the tax ID for the location record, which was causing some claim file records to be incorrectly rejected.
15. An adjustment was made to the claim file generation logic to ensure that the completed work (procedures) getting added to claims are defaulting to the correct

provider when assigning the claim's Treating Dentist.

16. Fixed a defect in the new Insurance Policy functionality in which the Associated Plan field was having issues detecting and displaying the policyholder's associated plans.
