Sensei Cloud Release 0.1.7792

# Sensei Cloud

Weekly Release

Build 0.1.7792 | June 6th 2022

This week's Sensei Cloud updates continue to expand core application functionality and deliver on recent customer requests.

## Allow Users to Define Anatomy Requirements for Procedure Codes

Sensei Cloud users can now specify what anatomy information is required when completing a particular procedure. Certain insurance providers require information that is not part of the ADA-specified details (tooth number, quadrant, etc.). Sensei Cloud has been enhanced to allow procedure code handling to be changed so that the information needed to satisfy the needs of these insurance providers is now required. Specifically, the Treatment Type (based on the ADA recommendation by default) can be changed to a different Treatment Type that includes the details required by the insurance provider. This will reduce the number of rejected claims. For additional information, see [How to Create or Edit a Procedure Code](#) on the Sensei Cloud How To website.

# Team Timecard Reporting Feature Enhancements

Filters associated with the Sensei Cloud Team Timecard Reporting feature have been enhanced. You can now apply a filter to hide all inactive Team Members and hide Team Members that have no data for the specified time period. This will reduce the size of reports by removing the information of team members that did not actively participate in the specified time period. For additional information, see [How to Access Team Timecards](#) on the Sensei Cloud How To website.

## Defects Fixed in Release 0.1.7792

The following anomalies have been fixed in this release.

### Eligibility Issues Caused by Invalid SSNs

A conversion defect which set invalid social security numbers (from the original data) to "000000000" which produced issues with the patient's eligibility status has been fixed. The existing data has been sanitized to remove all problem SSNs and convert them to blanks which will prevent the eligibility error. Future conversions will not make this error and automatically set problem SSNs to blank.

### Unable to Close Daysheet

Some customers have reported issues with closing the Daysheet if the accounts receivables (A/R) queries associated with Daysheet processing take a long time to complete. The A/R queries were recently enhanced based on customer feedback and the additional complexity caused the queries to take a longer time to run. These queries are in the process of being optimized to reduce run time; the pre-set timeout period has also been extended to allow Daysheets to close properly.

### Patient Images not Loading Although They are Known to Exist

Several customers have reported that image files sometimes do not load in the patient record even though they are known to have been captured in previous Sensei Cloud sessions. The problem was caused because the user who originally captured and stored the images is no longer associated with the patient record. Data handling has been improved and the problem fixed in the current Sensei Cloud Release.
