Sensei Cloud Release 0.1.7907

Sensei Cloud

Weekly Release
Build 0.1.7907 | July 03, 2022

This week's Sensei Cloud updates continue to expand core application functionality and deliver on recent customer requests.

User's Filter Settings Maintained Through Session

Filters set by a user that differ from the default settings of Sensei Cloud will be maintained throughout the current Sensei Cloud session. This allows users to seamlessly resume their workflow if some interruption caused them to perform some other task within Sensei Cloud. The filter settings will revert to the practice default once the user logs out or otherwise ends the Sensei Cloud session.

New Patient Identifier

The latest version of Sensei Cloud makes it easy to identify New patients. A patient is considered New if they have no posted procedures or no completed appointments. New patients have the word New on the Appointment card, the minicard avatar on the patient record, when printing the Day view, and in patient search. Additionally, New Patient is a report criterion allowing users to filter on New patients.

Daily Schedule Printing Enhancements

Daily Schedule Printing has been enhanced in the current version of Sensei Cloud. Users now have the option of selecting Grid or List view. Printing the Day View from Scheduler now includes Notes when using the List format. The Grid printout will now include standard appointment information along with patient notes, medical alerts, and current patient balance. Past-due payments are highlighted with an asterisk (*).

Defects Fixed in the Latest Version of Sensei Cloud

## Changes to Recall Settings > Default Appointment Type Not Saved

In some cases, Sensei Cloud did not retain changes to Practice Settings. If a user changed the Default Appointment Type of the Recall Settings, the settings would revert to the original default. This has been fixed in the latest release of Sensei Cloud.

Blank 'Credit to Merchant' Field Causes Error and False 'Pending' Ledger Line

A defect where a cancelled 'Credit to Merchant' transaction caused an Error 500 error and an inappropriate 'Pending' ledger line has been fixed in the latest release of Sensei Cloud.
