Sensei Cloud Release 0.1.9006

Sensei Cloud

Weekly Release

Build 0.1.9006 | November 06, 2022

This week's Sensei Cloud updates continue to expand core application functionality and deliver on recent customer requests.

Fix Expiration Logic in the Hard Tissue Chart

The Sensei Imaging Hard Tissue Charting has been enhanced so that existing work is visually expired, and the patient's hard tissue chart is meaningfully up-to-date and accurate. For example: when completing a crown, existing surface-based conditions such as decay or existing surface-based restorations such as a composite filling or an inlay will be removed from the hard tissue chart and only the crown will be visible. Expired conditions and restorations will be visible (and visually marked used a 50% opacity) in the Clinical Notes history but only the current state of the anatomy will be visible on the odontogram.

CDT Code Base Updated for 2023

All of the latest 2023 CDT updates are reflected in customer procedure lists, including the addition of 22 new codes, update to 13 existing codes, and archival of 2 deprecated codes.

Sensei Imaging User Experience Improvements

Sensei Cloud has been updated ensure that the acquired images can be easily and efficiently accessed so that office staff does not have to wait an excessive amount of time to preview images via clinical contexts. Additionally, the images displayed by Sensei Cloud works to ensure that acquired images are displayed in appropriate viewing quality. This prevents users from going through additional steps when reviewing a patient's images or radiographs.

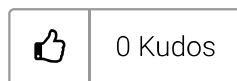

Optimizations and Fixes

The following fixes and optimizations have been added to Sensei Cloud this week.

- A defect where the Soft Tissue Chart notes did not always save properly has been corrected
- A defect caused poor performance when an office sent a large number of Bulk Correspondence simultaneously has been fixed
- A defect where Patient Search would sometimes not load the entire set of search results has been fixed
- The user interface for Patient Record has been altered to allow for the entry and storage of patient correspondence preferences when a customer tenant was flagged as Oral Surgery
- The Location Homepage widget has been altered to correctly calculated and display percentages
- An issue where duplicated payments were posted when the user used the tab key to the "Post Payment" button and pressed Entered multiple times has been resolved
