

JIB CRANES — 301 SERIES WALL BRACKET

WALL-BRACKET KITS

Spanco® Wall-Bracket 301 Kits allow customers to make their own wall-bracket jib cranes.

Spanco provides:

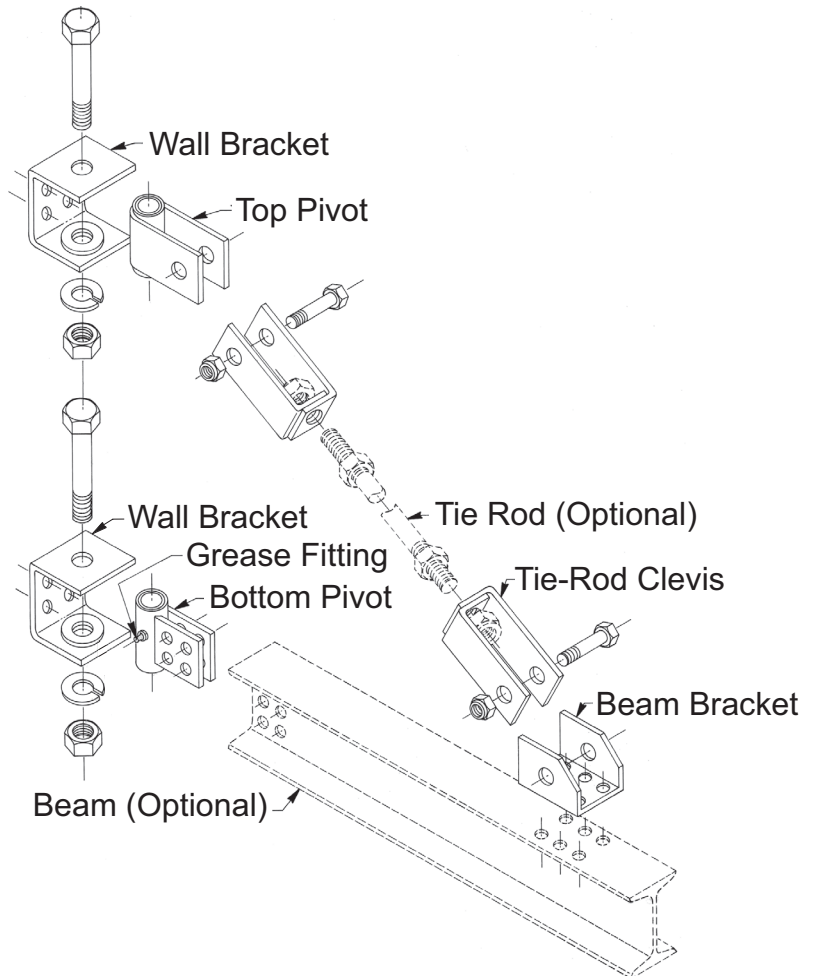

- Wall Brackets
- Assembly Hardware

The boom, tie rod, and mounting hardware are supplied by others.

Spanco also offers optional tie rods for these wall-bracket kits, including: 1", 1-1/2", and 2" diameter; call Spanco.

Customers can make their own wall-mounted jib crane by ordering Spanco Wall-Bracket Kits. These kits include the same components as the complete Spanco crane except the I-beam, tie rod, and grade 5 or A-325 mounting bolts, which can be purchased locally. The customer assumes sole responsibility for ensuring that the structure the jib crane will be mounted to is capable of bearing the stresses exerted by the crane. A qualified architect or structural engineer should always be consulted before mounting any jib crane to existing structures.

When assembling a Spanco Wall-Bracket Kit, the dimensions between the brackets must equal the dimensions given in the tables of the 301-Series Jib Cranes on **pages 92-96**. Spanco is not responsible for any variations, misuse, overloads, or incorrect installation of cranes using Spanco Wall-Bracket Kits.

Wall-Bracket Kit No.	Capacity (Tons)	Span	Est. Weight* (LBS.)
301-K1	1/2 and 1 ton	8' to 30'	79
301-K2	2 ton	8' to 30'	123
