

## The benefits of an aqupool mineral pool

- Beautifully soft on skin and hair
- Less skin and eye irritation
- Alleviates aches and pains
- Relieves stress
- aqupool is also a cost effective MINERAL POOL conversion product
- No need for additional chemicals, activator or mineral salts. All-in-one pack and only one application per month
- No specialised equipment required
- No messy mixing and measuring of chemicals. Everything you need in one pack, ready to pour in.

## How to test your pool water

- Take 1 test strip from vial provided.
- Immerse test strip in pool water for 2 seconds.
- Remove with pad face up, shake to remove excess water.
- Compare results to chart below.

If Chlorine reading is either too high or too low, adjust output and time on your chlorinator. If consistently too low, check chlorinator cell and/or salinity level.

If total chlorine is high, super chlorinate.

If pH is high, add hydrochloric acid at the rate of 400ml per hour until pH is reduced to ideal range.

If test strip reading for either Alk TH or CyA is in OK range or below, add aqupool.

If test strip reading is above the OK range for all 3, Alk TH and CyA, you may skip that month's application.

For larger pools ie, 30 000L to 60 000L plus, if test readings for Alk TH and CyA are in OK range or above you may reduce monthly application by 1 box.

If readings fall below OK range, revert back to 2 or 3 boxes per month as recommended on aqupool website for your pool size.

# aqupool

We believe looking after your pool should be a pleasurable experience

### This guide will show you:

- How to apply aqupool
- What to expect
- The benefits of aqupool
- The benefits of a mineral pool
- How to test your pool water

## How to apply aqupool

- If you're a first-time user of aqupool, best to have the pool free from debris and algae and chemically balanced before applying.
- Select a day of the month to apply aqupool, either the 1st or last day of the month works best as it's easy to remember.
- We recommend you backwash your sand filter or clean your cartridge filter and turn off your chlorinator prior to application.

- Take aqupool out of the box, cut along top of both compartments and simply pour aqupool into you pool.

- Use your pool brush to sweep and mix the product around the bottom of your pool until all dissolved. This process should only take a few minutes as aqupool is fast dissolving.
- Once all dissolved it's safe to turn on your pool pump and chlorinator.

## What to expect

- After applying, pool may go temporarily cloudy.
- Within a day or two you may see light brown debris settle on the bottom of the pool.
- The debris is precipitated particles which were suspended in your pool water. The flocculation chemicals in aqupool will extract those particles to provide you a cleaner and brighter pool.
- Simply allow your pool cleaner to suck the debris up and best to backwash your sand filter or clean your cartridge filter to fully remove the debris.
- Please note that if you have a suction cleaner permanently connected to your skimmer, you may not see the brown debris as the cleaner will remove it. Still best to backwash your sand filter or clean your cartridge filter.

## The benefits of using aqupool

- Because you're administering aqupool monthly, the occurrence of algae formation will be unlikely.
- No need for additional chemicals or salt apart from pool acid or hydrochloric acid to reduce pH. Pool acid is readily available from Bunnings or your local pool shop.
- Your pool will be evenly balanced the whole year round instead of only 2 to 3 times a year. This is better for your pool because an unbalanced pool may lead to scale or corrosion formation of your pool surface and equipment.
- No more lugging heavy bags of salt home as aqupool is delivered FREE to your door.\*
- No messy mixing and measuring of chemicals, everything you need is in one pack, ready to pour in.
- Easy to test and easy to understand test results with aqupool test strips and colour chart. No smoke and mirrors or anyone trying to upsell you.
- Your pool will become a MINERAL POOL with continual application.

\* Metro area only.
