

PLEASE READ, INSTRUCTIONS FOR WEATHER PROOFED INSULATED BOX

- Make sure the bees are calm before opening the box, it is always best to wait 15-20 minutes after positioning the hive before opening it.

- There is a break away tab of polystyrene that prevents the slider from moving to the right, this needs to be pulled off or cut off to allow the slider to travel

- Once the tab has been removed, slide the blue slider to the right, the hive is now fully open.
