

# CWTCHY COVER LID INSTALLATION INSTRUCTIONS

Since we're a Welsh company, we thought it was only fitting to call ourselves Cwtchy (Cu-chee) Covers! Cwtch in Wales means to hug and protect so give your tub a hug with Cwtchy Covers?

Our Cwtchy Cover insulated lid is ideal for trapping in any heat escaping through the top of the hot tub, keeping your tub hot and ready to use! Our light-weight yet dense insulation makes sure your hot tub is running as efficiently and economically as possible. The lid also comes with a robust support structure to raise the centre of your insulating lid, making sure rainwater doesn't pool on top!

## STEP 1 CHECK DELIVERY

**In your delivery you should have:**

- 4 x Black support poles (slightly angled)
- 4 x Locking Nuts
- 1 x 4-way Connector
- 2 x Tie down straps (with buckles on each end)
- 1 x Cwtchy Cover lid

## STEP 3 CONNECT SUPPORT POLES

- Screw a locking nut onto each one of the support poles
- Screw each of the support poles into the 4-way connector and position so the connector is raised in the centre
- Lock the poles in place by tightening the locking nuts

## STEP 2 INSTALL TIE DOWN STRAPS

- Pass the tie down straps under the hot tub (to do this safely, the tub must be emptied of water first)
- The straps should have equal length either side of the tub and should form a cross under the tub

## STEP 4 INSTALL POLES AND LID

- Lay the poles (poles slightly angled) on the hot tub so the connector is in the centre of the tub and place the Cwtchy Cover lid on top of the pole.
- Connect the lid to the support poles using the Velcro straps.
- Once the lid is in place connect the buckles and give the tie-down strap a firm tug, applying tension to the lid.
