HELPFUL HINTS for working with shimmer fondant:

The pearlescent pigments in the fondant create differences in the elasticity, texture, and moisture level compared to our classic fondant that require different approaches to workability.

✓ Ensure fondant is thoroughly **kneaded until soft and pliable.**

✓ If fondant is sticking to hands, a tiny amount of shortening or vegetable oil can be rubbed on hands. **Corn starch should be used sparingly** as it will dry the fondant and create cracking, only very little will be needed on work surfaces.

✓ To cover a cake, the **paneling technique** is recommended as to avoid cracking.

✓ The shimmer fondant works great in **molds & with cutters.**

✓ Sparkle on hands and tools can be **washed away with regular dish or hand soap.** If soap is unsuccessful, apply a small amount of food-safe cooking oil to a clean rag and wipe off.

✓ Addition of any Satin Ice fondant, gum paste and chocolate-based products can be used to **adjust product workability** and color.
