

Anti-vibration Kit

Thank you for choosing HKI AIR SUSPENSION products to control your air suspension.

Our mission is to provide the best experience for you and your vehicle. Our commitment is huge, from development, manufacture, service, sale and warranty.

This manual will provide all important information for the correct and safe use of our products.

However, if you have any difficulties or if you have any questions that are not addressed in this document, please feel free to contact our team.

hki@hkiairsuspension.com

The HKI anti-vibration system for air compressors has been developed to considerably reduce the noise and vibration levels generated during the operation of the compressors.

Installation Orientation

Replace the compressor mounting feet with the anti-vibration system.

Keep in mind that this kit is unitary, that is, if you have two or more compressors you must purchase a kit for each compressor.

It is very important that the assembly of the anti-vibration kit is done as indicated above. Pay attention to the placement of each component so that the kit performs its function and you have satisfactory results with the product.

ALWAYS depressurize the system and turn off power before installing and/or servicing electric compressors.
