

**BAMBOO BUILDING PRODUCT – Decking installation guide**

# Bamboo Building Products

Sustainable & Beautifully Engineered Bamboo

**TOOLS YOU WILL NEED;**

**DROP SAW**

**CIRCULAR SAW**

**SPIRIT LEVEL**

**PENCIL**

**HAMMER**

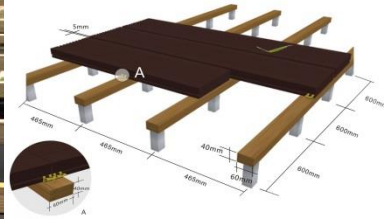

## CORDLESS DRILL, DRILL BITS

## MEASURING TAPE

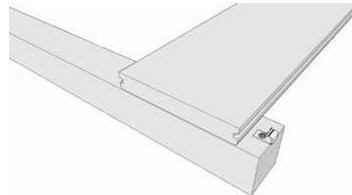

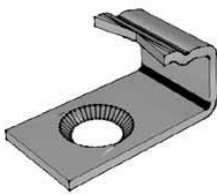

- 1) Build the Deck Sub Structure with 465mm centres. Refer to your local building code as a building approval may be required;

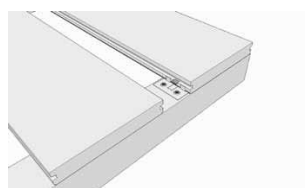

## 2) Lay the Decking Boards;

- Starting at one end lay the first board – use the starter clip or drill and screw the first board

- Slide clips into the side groove over the joist

- Slide next decking board into place and screw down the clip which will hold the decking boards in place – (Clip designs may vary)

### 3) **Clean and Seal the Finished Deck**

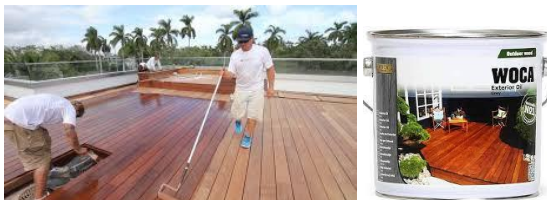

- The Finished Bamboo Deck should be cleaned and ideally apply 1-2 coats of decking oil after laying. This will ensure it stands the test of time.

### 4) Maintaining your new Deck;

Periodically or as required, we recommend cleaning and re-oiling your deck to ensure it serves you well for many years.

Clean with a hose or pressure washer using deck clean solution, wait to dry and then apply 2 – 3 coats of oil based decking oil

**Stand back and admire your finished deck.**

For Further information please call 1300 308 043 or your local Bamboo Building Products Agent.
