## OLED

OLED TV technology use Organic Light Emitting Diodes that displays a bright picture with deep black levels, vivid colors with higher contrast and faster refresh rates than other TV technologies. OLED TVs are also thinner allowing a very attractive and less bulky looking design.

## PIXEL DIMMING

The OLED panel technology allows each pixel to control its brightness independently from other pixels.

Since each OLED pixel is an independent light source, it self-illuminates the image with precise details.

## CHAMELEON EXTREME

Chameleon Extreme is Skyworth's advanced picture improvement technology. It intelligently optimizes contrast, details, and color tones to deliver the perfect picture.

## HDR10 and HLG HDR

HDR10 is the original standard of HDR for Hollywood video production that is compatible with 4K Blu-ray discs, 4K players, and 4K streaming content. HLG is the broadcast standard for live HDR production.

### Dolby Vision

Extreme detail processing, super contrast, color saturation, bring you infinitely realistic picture effects. Let you have an unparalleled visual experience.

The Dolby Vision HDR format developed by Dolby Labs adjusts the picture on a scene-by-scene (and even frame-by-frame) basis, lets you see a more dynamic picture with better detail and color accuracy

### Dolby Atmos

It breaks through the concept of 5.1 and 7.1 channels in the traditional sense, and can combine with the movie content to present dynamic sound effects.

Dolby Atmos developed by Dolby Labs expands on existing surround sound systems by adding height channels, allowing sounds to be interpreted as three-dimensional objects.
