

# Indoor Autoflowering Marijuana Plants - Pinching marijuana plants for growth

CHECK OUT OUR STORE: <https://t.co/DOVcB9wNjt>

The plant can't afford to spend a couple of weeks recovering from nutrient burn when it is only alive for 10-11 weeks. Over-feeding an autoflower plant causes a lot of stress and simply reduces your final harvest quality and quantity. Try to increase your nutrient levels slowly as the plant gets older, avoid sudden increases to nutrients. Autoflowering seeds grow, well, automatically when cultivated outdoors. Plant, water, and fertilize them, then let the sun and mother nature do the rest. Indoor growing is more technical, but just a bit. Whereas the Earth and the sun provide abundant soil and light, you'll have to provide those for your plant. I used to smoke it a ton before, but that ruins your lungs and you only get

10% of the magic because if you fire it too high it burns off the compounds and the effects don't last as long.

Autoflowering cannabis plants are hardy, fast, and easy to cultivate in confined spaces. What's not to love? Learn how to grow them week by week below. **HOW LONG DO AUTOFLOWERS TAKE FROM SEED TO HARVEST?** Autoflowering strains typically move from seed to harvest in 8-10 weeks. However, some varieties can take up to 12 weeks to fully mature. Indoors, autoflowering cannabis plants can handle up to 24 hours of light! This means that the buds will grow bigger and faster than outdoors. These plants thrive on light to grow ultra fast in their autoflowering cycles, so give them at least eighteen hours of light to maximize harvest yields.

These strains were created with countless breeding cycles to get rid of the dwarf traits and get a truly high yielding autoflower plant. You can read more about these SUPER autoflowers [HERE](#) . Autoflower Females vs Males. Regular(non-feminized) cannabis plants are two gender species and any regular seed will get 50:50 chance of being male or female. The bean is a cross between a reversed Charlotte's Angel and a Charlotte's Angel. Both parents showed great resistance to stress, and the "mother" was a short stout plant. Showed great drought resistance and wasn't super nutrient hungry. Can't wait to see how this grows! ?? **The Advantages and Disadvantages of Growing Autoflowering Cannabis.** There are many reasons why you should consider autoflowering varieties for indoor as well as outdoor cannabis: Pros Rapid Growth. Autoflowering strains can cut as much of half of the expected grow time necessary when compared to their alternatives. Smaller, More Compact Plants
