

Gamma's Type N Weatherproofing Boots are one of the few cable protection solutions available that install faster than Cold Shrink and that's only because they come pre-installed on the cable. Simply slide the boots up the cable and over the connectors and you're done. Just like Cold Shrink, the Boots are IP68 rated when installed making them a fantastic cable protection solution.

Gamma's Type N Weatherproofing Boots are manufactured from a highly UV resistant silicone rubber that protects and seals connections. This boot provides IP68 performance and makes for the ideal weatherproof LTE connection solution. We offer standard and right angle boots for 4.3-10, Type N, and 7/16 DIN connectors.

We recommend using RF Weatherproofing Boots in situations where you know you need to revisit the connection. If you know you need to go back to that connection in the near future to reset a radio/access point, (or something of that nature), you don't want to be cutting cold shrink, heat shrink, or tape off the connection with each visit. Slide-On Boots make it easy to disconnect your connection without having to change out your weather proofing, and resistance to ultraviolet exposure.

Applications

- UV resistant silicone rubber
- Reusable and flexible enough for easy slide on and off
- Waterproof to IP68 standard
- Preinstallation required for LTE jumper cables
- Perfect for outdoor RF coaxial cable connection protection
- Protects connections from the elements
- Available in right angle

Ordering Information

Cable Connection	Part Number	Width	Height	Depth	Connector Diameter	Cable Diameter
Type N to 1/4 Inch Coax & LMR400	BT-N-COAX25	1.40"	3.14"	N/A	0.58"	0.23"
