occurs and persists, get medical attention.

**Eye Contact:** Immediately flush eyes with water; remove contact lenses, if present, after

the first 5 minutes, then continue flushing eyes for at least 15 minutes. Obtain medical attention without delay, preferably from an ophthalmologist. Suitable emergency eye wash facility should be immediately available.

Ingestion Rinse mouth. If you feel unwell, get medical attention.

#### Most important symptoms and effects, both acute and delayed

Aside from the information found under Description of first aid measures (above) and Indication of immediate medical attention and special treatment needed (below), any additional important symptoms and effects are described in Section 11: Toxicology Information.

# Indication of any immediate medical attention and special treatment needed

Notes to physician: No specific antidote. Treatment of exposure should be directed at the control of symptoms and the clinical condition of the patient.

Storage temperature: 1°C - 49°C (34°F - 120°F)

Other data: Monomer vapors can be evolved when material is heated during processing operations.

See SECTION 8, for types of ventilation required.

#### 8. EXPOSURE CONTROL / PERSONAL PROTECTION

#### Control parameters

Exposure limits are listed below, if they exist.

Components	CAS No.	Regulation	Type of listing	Value/Notation
Diethylene Glycol Monoethyl Ether	111-90-0	US WEELs	TWA	25 ppm

#### **Exposure controls**

**Technical Control:** Use local exhaust, or other technology solutions to keep air levels below given or recommended limit values. If limit values are not present, good general ventilation should be sufficient. Local exhaustion mat be required in some operations.

# Individual protection measures

Eye/Face Protection Use chemical safety goggl
---

**Skin Protection**No precautions other than clean body covering clothing should be needed.

**Hand Protection** Chemical protective gloves are not needed when handling this material.

Consistent with general hygienic practice for any material, skin contact

should be minimized.

In case of using gloves, use gloves chemically resistant to this material. Examples of preferred glove barrier materials include: Neoprene. Nitrile/butadiene rubber ("nitrile" or "NBR"). Polyvinyl chloride ("PVC" or "vinyl").

Avoid gloves made of: Polyvinyl alcohol ("PVA").

**Respiratory Protection**Respiratory protection should be worn as there is a risk of exposure

above given or recommended Occupational Exposure Limits. If such limit values are not present, respiratory protection will cause effects such as respiratory irritation or discomfort, or when risk assessment indicates that this is required. Under most conditions, no respiratory protection should be required; If discomfort is experienced, use an approved respiratory

protective device.

**Hygiene measures** Wash hands before breaks and at the end of workday.
