Mounting Instructions

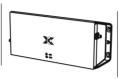

NOTE: This package comes equipped with screws and drywall anchors for mounting in standard drywall. Before you install the mounts, make sure there are no wires or other objects, or metal plates, behind the drywall that may interfere with the inserts, screws, mount, or mounted units.

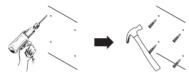

Determine Cel-Fi GO G41 location. (Refer to Installation section). Determine mounting hole locations.

Install unit.

In each marked spot, use a 3/16" drill bit to drill guide holes for the anchors. Install anchors (Drywall).

Attach the donor and server antennas.

Quick Installation

IMPORTANT: Your Cel-Fi GO G41 is electronic equipment. The Cel-Fi GO G41 must be kept indoors and in a dry, cool, well ventilated area

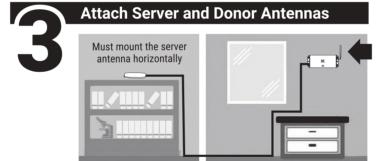

Ideally it should be placed with at least one wall between the donor and server antennas. If the patch antenna cable is too short, it may he extended

Other variations of the product package may include additional antennas or components.

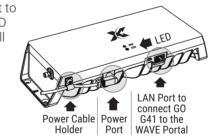

Attach the donor antenna and server antenna to the main unit.

Keep donor and server antenna separated/isolated from each other as far away as possible for best performance.

Plug In Cel-Fi GO G41 Plug-in the unit to power. The LED on the front will blink during setup.

Cel-Fi WAVE App The Cel-Fi WAVE app can be used to optimize the Cel-Fi GO G41 performance. The antenna locations can be adjusted or relocated and system performance quickly assessed via the Cel-Fi WAVE app.

WAVE app smart phone Bluetooth connects to the GO G41 via Bluetooth LE:

Frequency: 2402-2480 MHz Power: 0 dBm

Advanced Install

For best results, separate the donor and server antenna(s) as much as possible. Antenna separation (isolation) can be achieved with either physical distance or by having materials (like a wall) between the antennas.

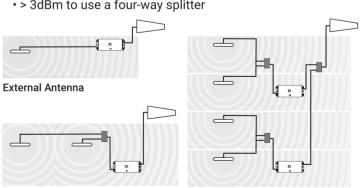

Make sure any cables, splitters, and antennas used in the system are properly matched. (Cel-Fi GO G41 is rated for 50Ω)

Recommend

- > 20dB port-to-port isolation for any splitter
- External directional antenna #A62-V44-200 will provide best overall system performance
- Wideband panel antenna #A52-V32-100 may be used as an effective indoor donor antenna

Downlink power should be:

- > 0dBm to use a two-way splitter
- · > 3dBm to use a four-way splitter

Splitting Server Antenna
