

# Install the Wireless Smart Thermostat on your own

## Good to know

95% of all tado° customers happily install their devices by themselves.

We offer detailed step-by-step installation instructions for more than 16.000 different heating systems.

Our highly trained Technical Support Team is available to assist during the installation.

You can install tado° yourself. However, you can alternatively book a professional installer in your area through the tado° App, if you would like to do so. We include professional installer instructions inside the box and [online](#).

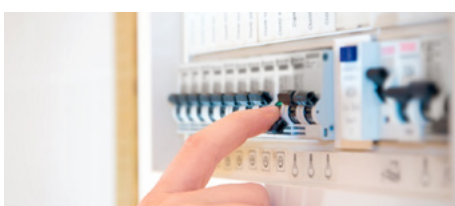

## Steps

**1 Start the online installation assistant**  
Scan the QR Code on the devices in your Starter Kit - Wireless Smart Thermostat with the tado° app. Follow the step-by-step instructions in the tado° app which will guide you through the installation process.

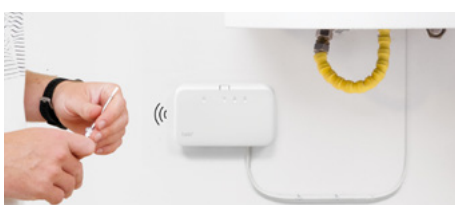

**2 Enter your heating system information**  
Tell us a bit about your existing heating system. This will help the online installation assistant to confirm tado°'s compatibility with your heating system and generate customised instructions.

**3 Follow the step-by-step instructions**  
Go to the fuse box and turn the power to the heating system off. This is very important to ensure a safe installation.

**4 Remove your existing controller or open your boiler**  
Follow the specific instructions in the tado° app to either remove your existing controller or to get access to your boiler wiring to install tado° - depending on your heating system.

**5 Install the Starter Kit - Wireless Smart Thermostat**  
Follow the customised online instructions to know how to install the Starter Kit - Wireless Smart Thermostat. Once you've finished the installation, you can turn the power to your heating back on.
