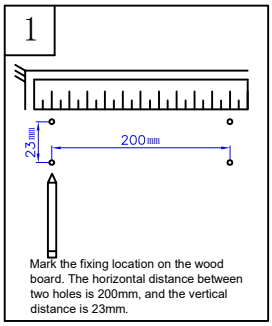
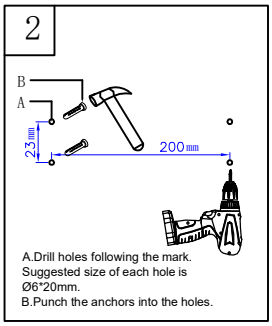
LED Strip Installation Instructions

Please read the instructions carefully before installation.

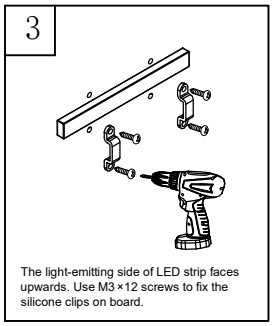
Silicone Clip Installation



Mark the fixing location on the wood board. The horizontal distance between two holes is 200mm, and the vertical distance is 23mm.

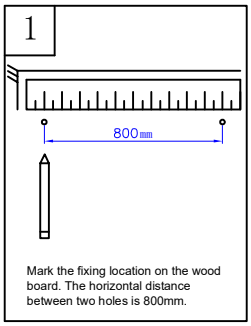


A.Drill holes following the mark. Suggested size of each hole is Ø6*20mm.
B.Punch the anchors into the holes.

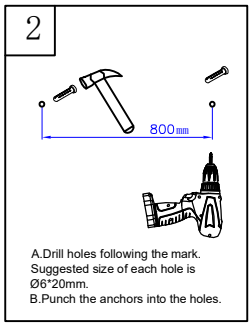


The light-emitting side of LED strip faces upwards. Use M3×12 screws to fix the silicone clips on board.

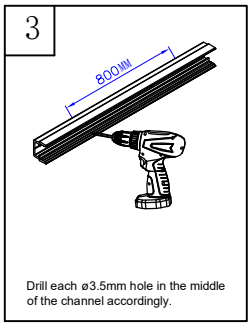
Square Aluminum Channel Installation



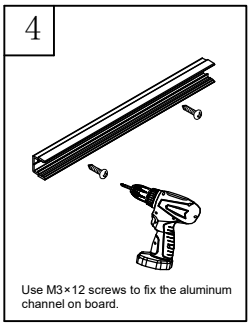
Mark the fixing location on the wood board. The horizontal distance between two holes is 800mm.



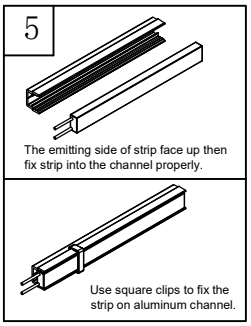
A.Drill holes following the mark. Suggested size of each hole is Ø6*20mm.
B.Punch the anchors into the holes.



Drill each ø3.5mm hole in the middle of the channel accordingly.

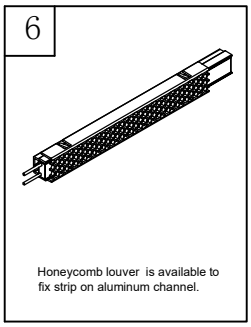


Use M3×12 screws to fix the aluminum channel on board.



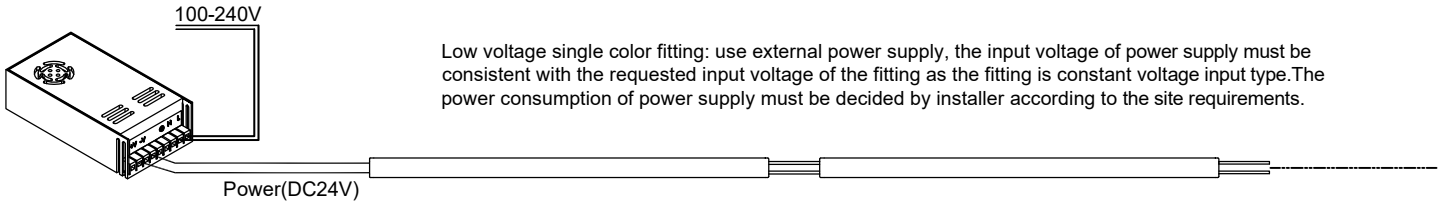
The emitting side of strip face up then fix strip into the channel properly.

Use square clips to fix the strip on aluminum channel.



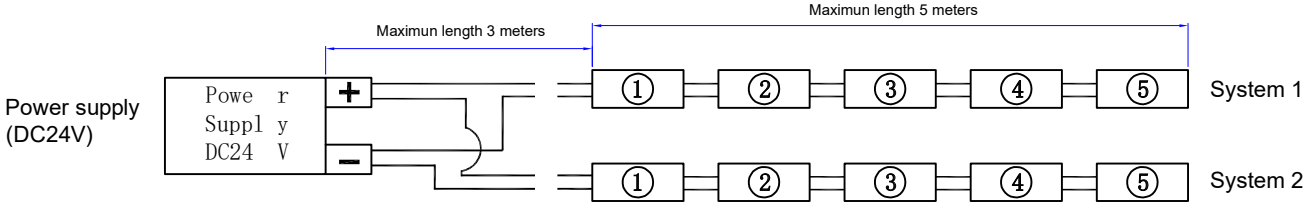
Honeycomb louver is available to fix strip on aluminum channel.

Wiring Instruction:



Low voltage single color fitting: use external power supply, the input voltage of power supply must be consistent with the requested input voltage of the fitting as the fitting is constant voltage input type.The power consumption of power supply must be decided by installer according to the site requirements.

24V DC: Product Circuit



Please refer to the above wiring instruction to keep the brightness consistence.

The installation instructions are suitable for below models:
