

VERIFIQUE™

## CANNABIS DETECTION TEST

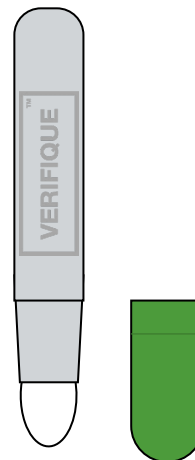

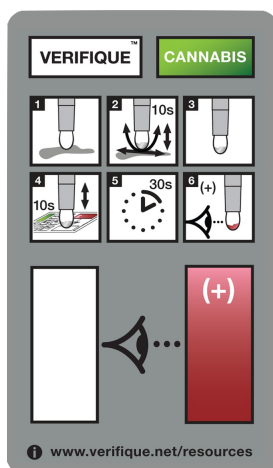

**Verifique's Cannabis Detection Test** is a simple, single-use test to screen for the presence of Cannabis. The test is capable of detecting most cannabinoids, including THC, CBD, CBG and CBN.

**Presumptive tests are not designed to give certain results and cannot replace a full lab analysis of your sample. A presumptive test cannot be used to assert that substances are safe to consume and cannot be used to assert that substances are legal/illegal.**

The dry card and pen delivery of the test allows users to safely collect and conduct analysis on any sample suspected of containing cannabis.

The natural solvent in the Verifique Test Pen allows the user to collect samples from surfaces, and in any kind of sample.

Verifique's test is designed to work on cannabis plant and any cannabis extract, including gels, oils, creams and edibles. The test can also be used to analyze samples off suspected paraphernalia, including vape pens, pipes and bongs.
