

VERIFIQUE™

FENTANYL DETECTION TEST

Verifique's Fentanyl Detection Test is a simple, single-use multi-drug test to screen for the presence of Fentanyl and Major Fentanyl Analogues. The test is capable of detecting multiple classes of narcotics, including: fentanyls (Fentanyl HCl, Fentanyl Citrate, Carfentanil, Lofentanil, Remifentanil, etc.), synthetic opioids (heroin, meperidine, etc.) and amphetamines (MDMA, meth, ephedrine, etc.).

Presumptive tests are not designed to give certain results and cannot replace a full lab analysis of your sample. A presumptive test cannot be used to assert that substances are safe to consume and cannot be used to assert that substances are legal/illegal.

The dry card and pen delivery of the test allows users to safely collect and conduct analysis on any sample suspected of containing one of the target narcotics.

The natural solvent in the Verifique Test Pen allows the user to collect samples from surfaces, and in any kind of sample, including pills, powders, rocks, and impregnated paper.
