

DOS

Cloud 3" Sleeping Pad
Owner's Manual

IMPORTANT!! To ensure the safe and proper usage of the DOS Cloud Sleeping Pad, please fully read and follow all instructions contained in this manual.

WARNING

 This product is flammable! Keep all flame and heat sources away from this product

 Carefully consider the location you place this product. Sharp rocks, jagged metal, stakes, spikes, nails, and other objects may compromise the integrity of the Cloud Sleeping Pad

Parts List

Identify all parts and ensure that they are in good condition and working order each time you use the DOS Cloud Sleeping Pad. The product contents include:

| QUANTITY | ITEM |
|----------|--------------------------|
| 1 | Cloud Sleeping Pad |
| 1 | Sleeping Pad Storage Bag |
| 2 | Elastic Storage Bands |

Use

It is important to read these instructions carefully before taking the pad on your first trip.

INFLATION

- The DOS Cloud Sleeping Pad is designed to self-inflate with minimal to no manual inflation. Properly inflating the Pad after it has been unpackaged is essential to ensure proper function.
- After unboxing your Pad, allow the Pad to self-inflate by opening the entire valve and setting the Pad aside for approximately 12-24 hours. After 12-24 hours have passed, feel free to top off the Pad either by mouth or with the use of a pump (recommended). Close the whole valve and open just the inflation valve (smaller valve) to ensure internal air pressure is maintained as you inflate.
- When setting up the Pad at your campsite, first unroll the Pad and spread it out in your tent. Open the entire valve and leave the Pad to self-inflate while you cook dinner, hike, swim, or explore.
- At bedtime, test the Pad and adjust the amount of air inside the Pad to your personal comfort level by using just the inflation valve.
- The Cloud Sleeping Pad's valve caps are easily closed by pressing down on the cap's hinge with one thumb and squeezing down around the rim of the cap with your other fingers.

DEFLATION & PACKING

- Begin the deflation process by opening the larger deflation valve at the end of the Pad.
- Roll the Pad loosely and kneel on the rolled Pad to remove most of the air. Repeat the rolling process once or twice until the Pad is compressed enough to allow the elastic bands to slide over each end of the Pad.
- Make sure to close all valves so that air does not begin to re-enter the Pad.
- After slipping the two elastic bands over each end of the Pad, slide the Pad into its stuff sack and draw the bag closed.

USE AND CARE

- While the DOS Cloud Sleeping Pad is built with durability and longevity in mind, please be sure to occasionally use a mild soap and water solution to clean the Pad. Mix a soap and water solution (1 part soap to 8 parts water) and gently wipe the Pad. DO NOT MACHINE WASH

- Do not expose an inflated Pad to direct sunlight or heat sources. This may cause the air to expand unnecessarily and apply too much excessive pressure to the seams of the Pad.
- Keep mats away from sharp objects such as rough stones and rocks, thorns, metal edges, etc.
- When using mechanical air pumps, please monitor the inflation level of the Pad to prevent ruptured seams and permanent damage to your Pad.
- Inspect your Pad's valves periodically to ensure no debris is preventing a positive air seal. Remove any debris with a damp cloth.
- Store your Pad away from direct sunlight and pets. Your doggo's sharp claws and teeth might just ruin your Pad!
- Store your Pad at home unrolled with the entire valve open in a dry area. This will ensure proper self-inflation the next time you use it. If you are unable to store the Pad unrolled, you may need to repeat the 'break-in' process before your next trip.

TIPS & TRICKS

- A well inflated Pad provides a warmer and firmer experience. Let your personal preferences guide you to create the best experience!
- To prevent moisture or humidity build up in the Pad, we **STRONGLY** recommend using a mini pump to inflate the Pad. Using your mouth to inflate may cause humidity build up inside the Pad.
- If moisture or water builds up inside the Pad for whatever reason, gently use a hair dryer on the lowest heat setting and blow warm circulating air through the Pad's valve. Take care to not damage the Pad.
- Relocating the Pad from a warm to cold environment may cause the Pad to reduce in volume. This is perfectly normal!
- When relocating the Pad between different elevations, we recommend leaving the valves open so that it is easier to remove the Pad from the storage bag.

A MESSAGE FROM DOS

Thank you for choosing the DOS Cloud Sleeping Pad for your new camping setup. We take pride in our design and manufacturing, and hope that this is the last Sleeping Pad you'll ever have to purchase for your overlanding needs.

For any questions or inquiries, please feel free to email support@desertoverlandsupply.com

We wish you all the best! Safe travels!
