USER GUIDE

The Slider Pipe

- 1 Stainless steel bowl (2 included)
- 2 Food-grade silicone pipe body
- 3 Anodized aircraft-grade aluminum body
- 4 Food-grade silicone mouthpiece filter adapter
- 5 9 mm Filter (optional)

Using your SLIDER Pipe

Grind herb and place into the steel bowl. If using a pod, a small unground bud can also be used. Light herb and take short, gentle inhalations. The smoke is cooled as it travels 12 inches around the maze of silicone ridges covered by the aluminum body. Resin and tar are also trapped on the slider's silicone surface.

For extra cooling, keep the aluminum part of your pipe in the refrigerator for 10-15 minutes before using. Do not put in freezer.

Each silicone pipe body is hand-primed with a drop of olive oil for easy sliding into the aluminum body. If you have difficulty with these two parts at any time, place a drop of olive oil on the inside of the aluminum rim to lubricate.

Adding a charcoal filter (#5 above) will block more residue and further enhance the cleanliness of your smoking experience.

SLIDER™ Pipe: Care and Cleaning

Keeping your pipe clean will allow it to do its job: protect your lungs from unwanted hazardous materials while gently cooling your smoke. When tar & resin build up on the silicone pipe body between ridges:

- 1 Separate all 4 pieces (as shown above) by gently pulling them apart.
- 2 Fill a container with isopropyl (at least 70% proof, but 99% is better).
- 3 Place each piece into container and make sure it is fully submerged.
- 4 Let pieces soak for at least 4 hours.
- 5 Remove from container and rinse with warm water, dry as required.

- 6 Put a tiny **drop of olive oil** on the inside rim of the aluminum piece before assembling. **NOTE:** Olive oil is important to reduce friction when inserting the silicone pipe body into the aluminum body.

Charcoal Filters

Weedgets does not make charcoal filters. After evaluating many filters on the market, we suggest purchasing 9 mm ActiTube Activated Charcoal Filters. If you find a filter that does a better job, reach out and tell us about it. We might just send you a thank you gift.

Troubleshooting

If you are having trouble using your SLIDER Pipe:

- 1 Check your stainless steel pod or bowl. If it is dirty, wash or replace it to remove any clogs.
- 2 Check the steel screen inside the silicone mouthpiece. If dirty, refer to cleaning steps above.
- 3 Consider purchasing additional small filter tips from weedgets.com so you can continue to use your pipe while cleaning this part.
- 4 If you are using disposable charcoal filters, replace the old one with a new filter.
