

# TOPBUXUS<sup>®</sup>

Topbuxus Health-Mix was developed by Europe's largest Buxus grower. Based on a 'tonic' already being used to increase the health of growing plants, essential elements were added, and the results were outstanding.

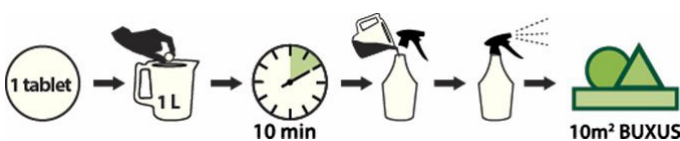

Topbuxus Health-Mix is a natural product that prevents and treats Buxus Blight, and contains nutrients that stimulate plant growth.

Topbuxus Health-Mix is non-toxic and bee and pollinator friendly.

One tablet is sufficient for a single application of 10m<sup>2</sup> (we recommend 4 – 5 applications per year).

## HOW DOES TOPBUXUS HEALTH-MIX WORK?

The Nitrogen stimulates growth, while the Magnesium and Sulphur enable the plant to take up micronutrients that will keep the leaves green and healthy. Copper hardens the cell structure of the leaves and stems to make the plant much more impervious to fungal spores. It will not only look much better, but it will be more robust and able to defend itself.

## HOW TO USE TOPBUXUS HEALTH-MIX?

One tablet of Health-Mix is enough to treat 10m<sup>2</sup> of Buxus.

1. Remove 1 tablet and drop into 1 litre of clean tap water. The tablet will take approximately 10 minutes to dissolve.
  2. Give the liquid a quick stir and pour into the sprayer.
  3. Spray the plants all over, paying special attention to any sick looking parts. Try to spray into the centre of each Buxus to ensure any hidden Blight spores are covered.
  4. Give your plants a second dose one week after the initial spray.
  5. Spray once every 6 weeks from September until the end of the growing season in May.
- It is most effective to spray Topbuxus Health-Mix in mild and dry weather.
  - Do not use Topbuxus Health-Mix if the temperature is over 25°C.

## WHEN BLIGHT IS IDENTIFIED

Follow the instructions on the Topbuxus Health-Mix pack to treat Buxus Blight.

Modify the spray treatment schedule if Blight is substantial and persistent:

**Week 1** — Spray the infected Buxus plant with the Topbuxus Health-Mix.

**Week 2** — Apply a second treatment.

**Week 3 to the end of the season** — Continue to apply once a month from September until the end of the season in May.

## WHY USE TOPBUXUS HEALTH-MIX?

Topbuxus Health-Mix will increase your plant's natural resistance while feeding the foliage and increasing the plant's wellbeing. Treated Buxus will soon be noticeably greener and stronger looking, and the typical yellow edged leaves and dull colour will fade away. To maintain healthy Buxus plants treat them 4 – 5 times throughout the growing season from September to May.

## F.A.Q

### Is it safe to use around other plants?

Topbuxus Health-Mix is perfectly safe to use around all plants. It has been designed specifically to optimise Buxus nutrition but can provide secondary nutrients to other surrounding plants.

### When is the best time to use Topbuxus Health-Mix?

Use Topbuxus Health-Mix during the growing season between September to May. However, it can be used right through the year with off-season applications further encouraging your Buxus to excel in spring.

### Do I apply Topbuxus Health-Mix to the roots/base of the plant or spray all over?

Topbuxus Health-Mix is a foliar feed and is taken in by the plant through the leaves, not the roots. Spray the plants all over and if possible apply to the centre of each plant as well.

### Can I spray my plants after I have just trimmed them?

Yes.

### Can I apply Topbuxus Health-Mix in the winter?

Yes. If you have Buxus Blight, Topbuxus Health-Mix will still be effective but don't expect much visual improvement during the winter months as the plants don't grow much at this time of year.

### What will happen if I give my plants an 'overdose' of Topbuxus Health-Mix?

Don't worry, your plants will not be damaged if you use more than the recommended amount.

### Once I've made up my Topbuxus Health-Mix solution, how long will it keep for?

There's no defined period but it will keep for a couple of weeks, although it may need stirring or shaking when you come to use it again. If the mixture becomes 'lumpy' or solidifies we advise you dispose of it as it is likely to block your sprayer nozzle.

### Can I use Topbuxus Health-Mix with other sprays?

In our experience Topbuxus Health-Mix can be safely used with other sprays or insecticides. However, spraying with other products very soon after you've just applied Topbuxus Health-Mix is not advised as this may wash off the Health-Mix. Allow Topbuxus Health-Mix 24 hours to dry before applying anything else to your plants (12 hours may be fine if the weather is warm and sunny).
