IGF-1 is a relatively small peptide (molecular weight 7647) that is tightly bound in serum to one of several high affinity binding proteins. IGF-1 has approximately 50% sequence homology with proinsulin and has a number of biological activities similar to insulin. IGF-1 is a hormone that serves as the major effector of GH-stimulated somatic growth, as well as GH-independent anabolic. [↗](#)

Insulin-like Growth Factor (IGF-1) (Blood) - Test Kits At Home

This ELISA kit can only detect the free form of human IGF-1. It does not detect the complex or bound forms such as IGFBP-bound IGF1. This assay employs an antibody specific for Human IGF1 coated on a 96-well plate. Standards and samples are pipetted into the wells and IGF1 present in a sample is bound to the wells by the immobilized antibody. [🔥](#)

Insulin-Like Growth Factor I (IGF-1) Home Health Test Kit

IGF-1 is a reliable indicator of human growth hormone (HGH) level. Low IGF-1 indicates Adult Growth Hormone Deficiency associated with rapid aging, decreased muscle and bone mass, slowing cognition and decreased quality of life. The kit comes complete with everything needed to test your levels. It even includes free shipping to the lab. [helpful resources](#)

Human IGF-1 ELISA Kit - Invitrogen

An IGF-1 test is used to diagnose growth hormone disorders, including: GH deficiency. In children, GH is essential for normal growth and development. A GH deficiency can cause a child to grow more slowly and be much shorter than children of the same age. In adults, GH deficiency can lead to low bone density and reduced muscle mass.

PMID: 21507690. This study focuses on the co-expression of interleukin-4 (IL-4) and insulin-like-growth factor-1 (IGF-1), which specifically target inflammation and cartilage repair, respectively.

PMID: 20188584. variability in height between dogs were associated with dramatic differences in insulin-like growth factor 1 (IGF1) and IGF binding. 🐶

Insulin-like Growth Factor (IGF-1) Blood Test - Walk-In Lab

Insulin-like growth factor is a type of growth factor and a type of cytokine. Also called IGF and somatomedin. Your blood spot samples will test: Insulin-like Growth Factor (IGF-1) levels. Everything you need to collect your sample and return it to the lab is included in the test kit you will receive. You can review these illustrated Collection. About This Kit. Human IGF-1 quantitates human IGF-1 in serum, plasma, supernatant. The assay will exclusively recognize both natural and recombinant human IGF-1. Target information. IGF1 (Insulin-like growth factor-1) is structurally and functionally related to insulin but has a much higher growth-promoting activity. 😊

IGF-1 (Insulin-like Growth Factor 1) Test: MedlinePlus

An Insulin-like Growth Factor Test, or IGF-1 Blood Test, is ordered to

help diagnose the cause of growth abnormalities and to assess pituitary function. The IGF-1 Blood Test is also known as SM-C/IGF-1, Somatomedin-C, and Sulfation Factor. No fasting is required for this test, and results will be delivered within 1-2 days. [the full report](#)
