LED Exterior Wall Sconce

START FROM HERE

- Make sure **POWER** is **COMPLETELY OFF** at the fuse box
- Have your fixture installed by a qualified licensed electrician
- Prepare everything in a clear area
- Wear gloves at all time during this installation
- Read instructions carefully before you start assembly
- Keep this installation sheet for future reference

Technical Support: 1-855-855-8926

Please Note:
- All Kuzco LED fixtures come with pre-wired LED module(s).
- Unless instructed to do so, please do not touch any part of the LED module(s) as any unnecessary contact with the module could cause permanent damage.
- For dimming, an ELV (Electronic Low Voltage) type of dimmer is required.

1. Remove the fixture from its original packaging. Remove the mounting plate **(1c)** from within the canopy backplate **(2b)** by unthreading four set screws **(2a).** Attach this backplate **(2b)** to the electrical junction box **(1a)**, using screws **(1d)** provided in the hardware package.

2. Attach the canopy backplate to the mounting plate, which is attached to the electrical junction box on the wall. First attach all wiring **(1b)** with the provided marrets (white to white "N", black to black "L", ground to ground "G"). Now place the canopy **(2b)** onto the mounting plate **(1c).** As you move the backplate align the holes to the holes on the mounting plate **(1c).** Next, turning clockwise tighten all four set screws **(2a)** util the fixture is secure to the wall.

3. To prevent moisture from entering the outlet box and causing a short, seal around the top and side perimeter between the fixture and the wall surface with weather resistant caulking (illustration 1). The space at bottom should be left un-caulked to prevent moisture build-up. Apply a small amount of weather resistant caulking around the side perimeter between the cap nut and mounting plate.

4. You have now completed the installation of your fixture, enjoy.
