GENOTROPIN is a prescription product for the replacement of growth hormone in adults with growth hormone deficiency (GHD) that started either in childhood or as an adult. Your doctor should do tests to be sure you have GHD, as appropriate. What is Genotropin? Genotropin is a form of human growth hormone important for the growth of bones and muscles. Genotropin is used to treat growth failure in

children and adults who lack natural growth hormone. Genotropin is synthesized in a strain of Escherichia coli that has been modified by the addition of the gene for human growth hormone. Genotropin is a sterile white lyophilized powder intended for subcutaneous injection. Genotropin 5 mg is dispensed in a two-chamber cartridge. <https://mccookbison.instructure.com/courses/11164/pages/sustanon-cena-w-aptece-sustanon-250-black-dragon>
