Trinabol 150 is a combination of three esters of trenbolone. The presence of the acetate ester allows trinabol to display a rapid initial physiological response. The other two esters, which release at slower rates, prolong the physiological response with a relatively flat absorption curve over the duration of the injection life-cycle. Trenbolone Enanthate is strictly an underground black market anabolic steroid. The compound first appeared in 2004 under the British Dragon label Trenabol. This makes Trenbolone Enanthate the youngest of the three common Tren forms and the only one that has never

been used in what we'd consider legitimate medicine.
