IGF-1 is an important growth hormone, mediating the protein anabolic and linear growth promoting effect of pituitary GH. It has a GH independent growth stimulating effect, which with respect to cartilage cells is possibly optimised by the synergistic action with GH. Insulin-like growth factor 1 (IGF-1): a growth hormone Insulin-like growth factor 1 (IGF-1), also called somatomedin C, is a hormone similar in molecular structure to insulin which plays an important role in childhood growth, and has anabolic effects in adults. IGF-1 is a protein that in humans is encoded by the IGF1 gene.

IGF-1 is an anabolic peptide hormone that has the role of stimulating growth, and to a lesser degree supporting maintenance of normal blood sugar levels. It was formerly called somatomedin (or somatomedin C) because it's a peptide in the somatomedin family. IGF-1 is, specifically, an anabolic peptide hormone. It's involved in growth, as well as helping to manage and maintain blood sugar levels. It is named as such because it has similar functions to insulin, though it's not as strong in respect to its ability to influence blood sugar.

Nutra IGF 1 purportedly contains a natural version of human growth hormone (HGH) called insulin-like growth factor (IGF 1). When you take HGH, your body converts the HGH into IGF 1 to provide specific benefits. HGH alone has no benefit: it's only benefit is that it converts into IGF 1, which does provide benefits.

IGF-1 là một trong những loại hormon đảm nhận chức năng kiểm soát sự sinh trưởng của cơ thể cùng với hormon GH. 31/08/2016 | IGF-1 (yếu tố tăng trưởng giống Insulin-1): một thông số thể hiện mức độ GH trung bình, giúp đánh giá chức năng tăng trưởng của tuyến yên. 03/06/2013 ...

The IGF-1 gene is on the long arm of chromosome 12q23-23. 15,16 The human IGF-1 gene consists of six exons, including two leader exons, and has two promoters. 17 IGF binding proteins (IGFBPs) In the plasma, 99% of IGFs are complexed to a family of binding proteins, which modulate the availability of free IGF-1 to the tissues. #academia #treino #musculacao #dieta #musculacao #foco #vidasaudavel #saude #nopainnogain #mulher #smartfit #mulheres #hipertrofia #morena #beleza #bodybuilder #instafit #gymtime #instagood #crossfit #smartfitalunos #muscle #gymlife #training #gymmotivation #motivation #personaltrainer #bodybuilding #lifestyle #workout IGF-1 is an abbreviation for the insulin-like growth factor. The hormone is important for humans of all ages. For children, it takes a critical part in securing optimal growth and development. For adults, the focus is on this compound's anabolic properties.
