Oral Trenbolone Dosage It is recommended that for the first cycle you take between 250 -500 mcg a day for an entire cycle, a cycle is 3 weeks. For the second cycle, you can step up the dosage to 750mcg a day for another 3 weeks and the third cycle you can go back to taking 500mcg per day. The Oral Trenbolone is an acetate version of the trenbolone that contains the carbon esters in its second position and this makes the steroid to be more soluble in the body and more over it binds the androgen receptors strongly. We're your health care home. By supporting us, you will receive high quality health care at great savings! We offer comprehensive medical care for the whole family, dental care, and pharmacy services. There are two version of oral trenbolone available, one with an acetate ester and a methylated version called Metribolone (methyltrienolone), which has been altered at the 17th carbon position for oral use.

Trenbolone Acetate is a 19-nortestosterone (19-nor) anabolic androgenic steroid. The 19-nor classification refers to a structural change of the testosterone hormone in that it lacks a carbon atom at the 19th position. This puts Trenbolone Acetate in the same category as Deca Durabolin (Nandrolone Decanoate).

Trenbolin (Trenbolone Enanthate) [10 ampoules/box] Trenbolin-10ml (Trenbolone Enanthate) [10 ml vial] August 2019, I made a decision to get back into bodybuilding and potentially thought about competing. It wasn't until recently that I felt like taking things to the next level. Fast forward to today, I have really adjusted my training, nutrition, and mindset to ready myself. Trenbolone acetate (tren-a) has also been known to restrain glucocorticoid hormones. A high rate of glucocorticoid hormone will make your body tend to gain fat than muscle. This makes "tren-a" a good agent for those who are in a diet or the bulking cycle. It will keep your body from gaining fat, and turn it into muscle instead.
