Clenbuterol used for weight loss or performance enhancement can be acquired as a tablet, liquid, or injection. People using clenbuterol for this purpose typically use between 0.06 and 0.12... Clenbuterol Weight Loss Clenbuterol or Clen is beta-2 adrenergic which help burn fat even when the user is not exercising. This steroid-like drug also contains thermogenic properties that increase metabolic rate and burning of stored fat in the body. It retains strength and muscle mass while reducing weight and fat content. These are what your body undergoes when you take clenbuterol: It targets the fats around your

abdomen and under your skin, resulting in dramatic weight loss. Clen causes your arteries to expand, delivering more oxygenated blood to the muscles. Clenbuterol Dosage For Weight Loss The recommended dosage of clenbuterol for the treatment of bronchial asthma is 0.02-0.03 mg taken twice daily. However, according to the Drug Enforcement Administration, bodybuilders and athletes abuse this drug by taking 60-120 µg per day along with other performance-enhancing drugs (9).
