

# Methenolone Acetate Oral Cycle - Bayer Primobolan Canada

SHOP OUR ONLINE STORE: <https://t.co/6TbW9ehu71>

Methenolone Acetate (Oral Primobolan) The oral form of Primobolan is Methenolone Acetate in chemical form, with the acetate being a small ester attached to the Methenolone hormone so it can be consumed in oral form. If you are using the oral one as a solo steroid, then you might need at least 100mg/day, five to six times a week to notice any serious gains. The cycle can be continued for 12 weeks. Methenolone Acetate has a very short half-life of about 5-weeks or so. Section 2. Alpha Wolf Lab Primobolan 10 \$ 135.00 \$ 121.50. Add to Wishlist. Substance: Methenolone Acetate. Manufacturer: Alpha Wolf Lab. Pack: 50 tabs (10mg/tab) Sale! Read more. Email me when available. Alpha Wolf Lab Primobolan 50 \$ 260.00 \$ 234.00. In its liquid form it is known as methenolone enanthate. As an oral tablet it is known as methenolone acetate. Active life: oral methenolone (4-6 hours); liquid (injectable)

methenolone (10-14 days). The ideal dose of Oral Primobolan for male athletes is 75-150mg every day for a cycle of 10-12 weeks. Methenolone Acetate is ideally stacked with Halotestin or Trenbolone during a dieting or cutting phase. Some athletes even stack Oral Primobolan with Anadrol 50, Testosterone derivatives, and Dianabol for bulking phases of training. <https://teacher.desmos.com/activitybuilder/custom/60d0f4fec7d5e682107cceb6>
