

## How to try the AddBike+ for the first time

**The AddBike allows you to turn a bicycle into a cargo bike. The tilting-wheel system of the AddBike brings new riding sensations. Please find below our tips to get comfortable faster!**

### **1 AddBike settings**

- Place both wheels to the back of the AddBike (please refer to the manual if necessary)
- If you are loaded, please place both wheels to the front
- Use the intermediary position (yellow area) on the shifter on the right part of the handlebar
- Lower the height of your saddle for more stability

### **2 Before trying the AddBike**

- You're about to try a cargo bike instead of a bicycle: get ready to practice!
- It is normal to be surprised by the first riding sensations because of the tilting system
- Try it out several times. Three short rides are better than one long test ride

### **3 During the test ride**

- Look forward instead of the tilting wheels
- Steering & Learning: the AddBike feels smoother with slight body-leaning in curves
- Trust the AddBike: explore leaning during curves
- Don't be afraid to speed up and ride at 10km/h. This makes it easier to balance

### **4 After the first test ride**

- If you're still uncomfortable, wait a couple of hours and try again
- Try other settings (tilting wheels, wheels position,...) to find your favorite
- Being comfortable with the AddBike may take from 5 minutes to a few hours according to:
  - Your bike selection: city bike, electric bike, mountain bike, fork, handlebar
  - To people's preferences
  - The conditions and quality of bicycle paths
