

TEST REPORT

DETERMINATION OF THE VIRUCIDAL ACTIVITY OF THE BLUE PRODUCT ACCORDING TO THE EN 17122:2019 STANDARD

Delivered to : **M OURSEL**

For : **WeCleen**
PEPINIERE CLEANTECH
AVENUE L. PHILIBERT
13 100 AIX-EN-PROVENCE

Date of request: 03/03/2022

Study number: n°060D22-2022

VIRUCIDAL TESTS:

According to the NF EN 17122 (November 2019) standard – chemical antiseptics and disinfectants – quantitative non-porous surface test for the evaluation of virucidal activity of chemical disinfectants used in the veterinary area (phase 2, test 2).

Tests using the BLUE product, against the *canine parvovirus*.

This test report included 13 pages.

Study completion date: 04/07/2022

2 PRODUCT IDENTITY

SAMPLE	BATCH
BLUE	NC

Expiration date: non communicated

Manufacturer: WeCleen

Date of manufacture: non communicated

Storage conditions: according to the sponsor recommendations

Active substances: non communicated

Appearance of the product: liquid, colorless

Product diluent: none, ready-to-use-product

Date of delivery of the product: 03/07/2022

Date of tests: from 03/07/2022 to 04/07/2022

3 EXPERIMENTAL CONDITIONS

Temperature used during the assays: $25^{\circ}\text{C} \pm 1^{\circ}\text{C}$

Titration units: log TCID₅₀ for canine parvovirus

Exposure time: 1 min – 2 min

Diluent used for the product: distilled water

Final concentrations tested: 100% - 80%

Viral strain: canine parvovirus ATCC VR-943, grown on fibroblast cells, at 37°C , under 5% CO₂ atmosphere

Organic soil load: 3 g/L bovine serum albumin (clean conditions), 3 g/L BSA + 3 mL/L sheep erythrocytes (dirty conditions)

Product stability: good

Stop solution: cold shock

4 VIRAL TITRE:

Viral titers are expressed in log TCID₅₀:

- For canine parvovirus, titer = 7,250 log TCID₅₀

Writer	Supervisor
Ms Emilie CANTREL, laboratory technician 	Ms Stephanie MOROT-BIZOT, director 

5 VALIDATION

a) CYTOTOXICITY

The cell toxicity was observed until to the dilution 10^{-2} .

b) SENSIBILITY ASSAYS

The viruses were titrated on cell cultures untreated with the product (indicator cell line) and titrated on cell cultures treated with the product. According to the European standard EN 17122, the BLUE product used at the dilution of 10^{-3} does not have an effect on the viruses titration method (the difference between viral titers must be $< 1,0 \log$):

CLEAN CONDITIONS

CANINE PARVOVIRUS		Viral titer (log TCID ₅₀)	
Dilution		Untreated cell cultures	Treated cell cultures
BLUE	10^{-3}	7,250	6,750
			0,500

DIRTY CONDITIONS

CANINE PARVOVIRUS		Viral titer (log TCID ₅₀)	
Dilution		Untreated cell cultures	Treated cell cultures
BLUE	10^{-3}	7,250	6,500
			0,750

c) VIRAL SUSPENSION AND WATER CONTROL

CLEAN CONDITIONS

Product	Organic soil load	Viral titer (log TCID ₅₀)	Viral titer after drying time (log TCID ₅₀)	Drying time (min)	Difference
BLUE	3 g/L BSA	TRIAL 1: 7,250	TRIAL 1: 6,750	50 min	0,500
		TRIAL 2: 7,250	TRIAL 2: 6,625	54 min	0,625

DIRTY CONDITIONS

Product	Organic soil load	Viral titer (log TCID ₅₀)	Viral titer after drying time (log TCID ₅₀)	Drying time (min)	Difference
BLUE	3 g/L BSA + 3 mL/L SE	TRIAL 1: 7,250	TRIAL 1: 6,875	51 min	0,375
		TRIAL 2: 7,250	TRIAL 2: 6,500	49 min	0,750

d) VALIDATIONS OF THE COLD SHOCK METHOD

CLEAN CONDITIONS

Product	Organic soil load	Viral titer (log TCID ₅₀)	Difference with the viral suspension
BLUE	3 g/L BSA	TRIAL 1: 7,250	0,000
		TRIAL 2: 7,250	0,000

Writer	Supervisor
Ms Emilie CANTREL, laboratory technician 	Ms Stephanie MOROT-BIZOT, director 

DIRTY CONDITIONS

Product	Organic soil load	Viral titer (log TCID ₅₀)	Difference with the viral suspension
BLUE	3 g/L BSA + 3 mL/L SE	TRIAL 1: 7,250	0,000
		TRIAL 2: 7,250	0,000

6 VIRUCIDAL ASSAYS

The concentrations of the product demonstrated a virucidal activity on the virus tested if the viral titer reduction is $\geq 3,0 \text{ log}$.

CLEAN CONDITIONS

TRIAL 1 – The viral suspension (water control) was titrated at 6,750 log TCID₅₀.

Drying time: 50 min

PRODUCT	Concentration	Time of exposure	Temperature	Viral titer (log TCID ₅₀)	Viral titer reduction
BLUE	100%	1 min	25°C	2,750	4,000
	80%	2 min		3,250	3,500
		1 min		4,125	2,625

TRIAL 2 - The viral suspension (water control) was titrated at 6,625 log TCID₅₀.

Drying time: 54 min

PRODUCT	Concentration	Time of exposure	Temperature	Viral titer (log TCID ₅₀)	Viral titer reduction
BLUE	100%	1 min	25°C	2,375	4,250
	80%	2 min		2,750	3,875
		1 min		4,125	2,500

DIRTY CONDITIONS

TRIAL 1 – The viral suspension (water control) was titrated at 6,875 log TCID₅₀.

Drying time: 51 min

PRODUCT	Concentration	Time of exposure	Temperature	Viral titer (log TCID ₅₀)	Viral titer reduction
BLUE	100%	2 min	25°C	3,000	3,875
		1 min		4,125	2,750
	80%	2 min		4,625	2,250

TRIAL 2 - The viral suspension (water control) was titrated at 6,500 log TCID₅₀.

Drying time: 49 min

PRODUCT	Concentration	Time of exposure	Temperature	Viral titer (log TCID ₅₀)	Viral titer reduction
BLUE	100%	2 min	25°C	2,500	4,000
		1 min		3,750	2,750
	80%	2 min		4,500	2,000

Writer	Supervisor
Ms Emilie CANTREL, laboratory technician 	Ms Stephanie MOROT-BIZOT, director 

7 VALIDATION OF THE METHODOLOGY

The assays were validated as required by the European standard EN 17122:

- The viral titer of the suspension tests were sufficient in order to observe a reduction of 3 log after time exposure with the product:
 - 7,250 log TCID₅₀ for canine parvovirus
- The BLUE product does not have a cytotoxic effect on the fibroblast cells.
- The BLUE product does not affect the infectious capacity of the canine parvovirus:
 - In clean conditions, the differences in viral titers between the virus inoculated on fibroblast cells and the virus inoculated on the fibroblast cells treated with the product was ≤ 1,0 log (0,500 log).
 - In dirty conditions, the differences in viral titers between the virus inoculated on fibroblast cells and the virus inoculated on the fibroblast cells treated with the product was ≤ 1,0 log (0,750 log).

8 CONCLUSION

The assays performed with the BLUE product:

- Demonstrated a virucidal activity on the canine parvovirus from the concentration 100%, following a 1 min exposure period, and from the concentration 80%, following a 2 min exposure period as required by the European standard EN 17122, at 25°C, in low-dirty conditions.
- Demonstrated a virucidal activity on the canine parvovirus from the concentration 100%, following a 2 min exposure period, as required by the European standard EN 17122, at 25°C, in high-dirty conditions.
