Nanoplasty

Application Guide

For

- W ONE** – All hair excluding blond or Grey hair
- W TWO** – Blond & Grey hair
- Eco Reduxer** – Thicker Blond & Gray hair
- Nano Gel** - All hair excluding blond or Grey hair

Application instructions:

Prior application of Nanoplasty: It is imperative to analyse the hair, the Professional will need to decide whether the hair is fit for the procedure as hair will need to endure heat. If the hair is unfit, try using our repair systems and attempt to restore hair's health before proceeding.

1. No clarifying shampoo or washing is required, unless the hair is dirty or has product in hair
2. Mist the hair with water if the hair is extremely dry. Otherwise apply on dry hair.
3. Apply Straightening System starting with one finger(horizontal) from the root to avoid direct contact with the scalp
4. Leave the product to act for 1 hour, or the necessary time according to the density and the hair strands porosity. Technical analysis is recommended by a hairstylist.
5. Rinse only the excess product from the hair, leaving 10% to 20% of the product on the hair
6. With the aid of a hairdryer, dry the hair completely.
7. Using the Heat Matrix table below, set your straightening iron from 180 °C to 240 °C depending on how curly, thick, or dense the hair strands are. Check the first hair strand for colour change, reduce the temperature if required. Iron each strand 5 to 20 times depending on the straightness you desire, whilst confirming that the strands are sealed. We recommend using our thermal protector to ensure extra protection during the heat procedure.
8. To finalise the treatment correctly we recommend go back to the basin, wash the hair using the following products: Wone 3in1 Conditioner, after the rinse, apply W one Shampoo, and as last step, apply Marroco or Macadamia Mask, letting the mask sit for 5 minutes.

Tips:

1. For a high gloss finish: Completing step 7, Apply our Argan or Moringa Oil generously onto the hair after Ironing, then follow step 8. Once the hair is dry, apply our Glow Spray evenly around the hair, approx. 5 sprays will do. Then, take your shot and show it off!!
2. Before and after shots: After completing tip 1, make sure you have your camera/phone mounted on a tripod and a light shining directly at the hair (not above the hair), then move, flick, wobble hair to get that sensational glossy look
3. For a perfect result, we highly recommended using a titanium plate straightener which has consistent heat delivery to seal the cuticles correctly. Our recommendation is Lizze Extreme.

Heat matrix

450F-410F/240C-210C

Thick, stiff, coarse or afro hair

410F-375F/210C-190C

Normal, curly hair, dark-coloured or natural hair

375F-340F/190C-170C

blond hair or bleached hair

340F-300F/170C-148C

Delicate, fine or damaged hair
