There will also be some liver toxicity, however with the presence of two injectable steroids (test and tren), it will be less hepatotoxic than the dianabol/anadrol cycle. Anadrol and trenbolone is another common and powerful steroid cycle, which can be taken together like anadrol and test. Anapolon (Oxymetholone) Anapolon has been the strongest, oral steroidal compound, which is a derivative of dihydrotestosterone, which has been currently only available for institutional use in Mexico. Clinically, Anapolon had been often prescribed in efforts to treat anemias that had been caused by deficient red cell production. Tren, test and anadrol was described by Dan Duchaine, (RIP) as the most effective stack for man. Who has tried or would be willing to try this method? To me, it makes very good sense that this could be the greatest cycle for serious size. I don't know much about what Dan said or how deeply he

explained his theory or opinion on this, but I am interested to find out. Only thing that has come close is a cycle I did with test p + tren a + methylstenbolone. And the methylstenbolone made me feel liken I was dying. The side effects from anadrol are significantly less, unless my hair starts to fall out in patches. Last edited: Jul 4, 2014.
