Please forward any available previous reports

CONSULTATION APPOINTMENT

- Please bring or ask your referring physician to forward any relevant cardiac records or investigation reports. Please bring your current medication list.

ECHOCARDIOGRAM

- Echocardiogram is an ultrasound of the heart. The test shows live moving images of your heart. A technologist uses ultrasound gel to slide a microphone-like device over the chest area. No radiation is involved in the heart ultrasound. No preparation required.

STRESS TEST/ STRESS ECHO

- You will be exercising by walking on a treadmill. Your vitals and ECG will be monitored continuously. For Stress Echo studies, ultrasound images will be taken before and after exercise. Please bring a list of your current medications. Please do not take the following medications 24 hours prior to your test: Beta blockers (Metoprolol, Atenolol, Bisoprolol), unless advised otherwise by your referring doctor.
- On the day of the test, have a light meal before the test wear comfortable clothes. You should plan on being at the lab for about 50-60 minutes (exercise part of the test usually takes only 5-15 minutes).

HOLTER MONITOR

- Also known as an ambulatory ECG monitor, a Holter monitor records your heart rhythm for an entire recording period (24/48/72 hours). Wires from electrodes on your chest connect to a battery-operated recording device worn on a belt or shoulder strap.

LOOP RECORDER

- A loop monitor is a patient-activated recording device which is used to record your ECG for a longer duration (2 weeks). Recorded data will be analyzed and correlated with documented symptoms. Hook up takes 15-25 minutes.

AMBULATORY BP MONITOR

- Ambulatory blood pressure monitor will measure and record your BP readings for 24 or 48 hours. The recorder will take measurements of your blood pressure every 15-20 minutes during the day and every hour during sleep. Hook up takes 15-25 minutes. Please carry out all your activities as usual except for bathing

ECG

- Electrodes are placed on your chest to record your heart rhythm. No preparation is required. You should plan on being at the clinic for about 20 minutes.
