

Food PANtrie - Directions for Use

It's a Sprouter too!

It's one thing for a dryer to preserve food. But how about a dryer that grows food too? That's the Food PANtrie. It allows more seeds to sprout than conventional methods since the seeds are exposed to more air.

DIRECTIONS FOR DRYING:

Slice Food, place on tray, and let the sun or warm air do the rest. Use inside or out. Perfect for use in the summer time outside, so you can use solar power to sun dry your food, and keep the bugs out. Also works inside too.

DIRECTIONS FOR SPOUTING:

- Spread seeds on tray
- Soak over night in water
- Place tray in rack
- And let Mother Nature do the rest.

Compact Size

With its hook, the Food PANtrie hangs anywhere: (kitchen, garage, orchard, patio, motor home, etc.) giving you a full 5 square feet of drying space per dryer. In storage, it's only 3 x 15 x 15 inches.

Easy to clean

And easy to store. The trays are made from bendable, almost indestructible polypropylene, and are designed for lifelong service and dishwasher-safe cleaning.

Free E-Book

It gets better. Each dryer comes with information on how to download the instructions on how to dry and grow food year round. Learn how to dry fruits and vegetables, grow sprouts, and even how to use your dryer to earn money. Build a home based business by selling your dried food to a cooperative.

The best of both worlds!

For sprouts with the highest nutritional value, grow wheat grass - the Fodd PANtrie way. No soil is needed. Eat the whole thing: sprout, root, and the husk (for fiber).

Get natural, hassle free food drying and sprouting for your family, anywhere you want: inside and outside your home. So just think, with both dried and fresh natural food, you now have a system for meeting the complete nutritional needs of your family.
