Fast Fusion's MobileFusion Trac36® is an all-weather fusion system that incorporates weld bead cooling technology. By bringing fusion operations into the safety of a cab, fusion sites are safer and more productive – up to 70% more productive than conventional fusion processes. One of the key benefits of MobileFusion Trac (MFT) machines is FastLoad® – a self-loading front boom that allows single operator loading from within the cabin area. That means no extra heavy equipment on the site to load or hold pipe in place for pipe fusions.
