ASSEMBLY METHOD

Tips: You can decide whether to insert the plastic expansion tubes according to the installation wall type.

1 Firstly, confirm the installation position of the wall connectors by measuring. You should ensure that the wall connectors are in line vertically with the fence panels and that the height is staggered from the height of the fence rings. You can use the fence stakes to thread the wall connectors and the fence together to confirm the position as shown in the figure, and then drill holes for installation after marking the wall.

2 After that, assemble the fence to be installed with the wall connectors first. On the other side, use the fence stakes to thread the wall connectors and the fence together as shown in the figure to confirm the installation position on the other side. Also, make sure that the wall connectors are in line vertically and that the height is staggered from the height of the fence rings.

3 After the installation is complete, align the fence with the wall connectors and insert stakes.
