

BRIGHTLIGHT

2023

**LINEAR
SOLUTIONS**

COVER IMAGE

This impressive school-fitout project featured both square and rectangle lighting, custom-built using our popular Highline 05 100mm luminaire.

Custom powder-coating provided a unique and eye-catching result. Bespoke shapes such as these are available as custom builds.

Visit our website for more information.

SERVICES

LIGHTING DESIGN

Bright Light has a design service that offers lighting calculations referring to industry standards and based on your lighting requirements. The resulting reports include technical information, basic 3D visualization, illuminance or luminance levels and lighting quality.

We use 3D Simulation as a great tool for showcasing the lighting effects - an important tool for decision making! Through the rendering process, fast and photometrically accurate colour images are generated to clearly communicate the behaviours of lighting within an environment.

Get in touch with us to discuss your next project.

PHOTOMETRICS

Photometric data is fundamental to understand the performance and behaviour of luminaires. Macarena is our gonio-photometer machine, residing in Bright Light's testing lab which allows us to measure the entire 3D distribution field for any light source. She can also read the lumen output, luminous efficacy (lm/W), colour temperature (CCT), colour rendering index (CRI), flicker value and other spectra information of luminaires.

Using a spectrometer sensor and a built-in power analyser, Macarena measures and integrates all this data into LDT and IES photometric files, used by lighting designers, as well as comprehensive PDF reports.

Macarena is key for our product development process and custom projects, allowing us to understand how the luminaire design impacts the light performance and helping us achieve our customer's needs.

WORKSHOP SERVICES

We have a well-equipped workshop that can provide product preparation, product customisation, and in-depth technical support. Our workshop can:

- Prepare linear LED to length and add tails
- Create corner connections and extensions
- Prepare IP66 connections for IP66 COB LED ribbon strip
- Cut aluminium LED Profiles to length, including mitre cuts
- Mount linear LED ribbon to aluminium LED Profiles

Bright Light also has a comprehensive Research and Development lab with experienced in-house technicians who can provide solutions and technical support for many of your LED light installations

- LED and control system specification advice including wiring diagrams
- Specify cable sizes required depending on voltage drop within an installation
- Troubleshooting advice and solutions
- Warranty repairs
- Product testing

We also have a dedicated production line for Linear Profile products.

LED & LIGHT

COLOUR RENDERING INDEX (CRI)

Colour Rendering Index, or CRI, is a term used to describe the measure of how well light sources render the colour of the objects they illuminate. The CRI of a light source is calculated by comparing the appearance of eight reference colours (R1 to R8) under the light source in question with a reference light source (incandescent light or sun light). The smaller the difference between the reference colours when viewed under the two light sources, the higher the R value will be. The first eight R values are then averaged, and the resulting number is the CRI value.

COLOUR TEMPERATURE

Correlated Colour Temperature, or CCT, refers to the colour appearance of white LEDs and is measured in Kelvins (K). Warmer temperatures create a cosy feel, cooler temperatures a more alert space. 4000–4500K provides a natural white, simulating daylight and balancing eye comfort with good task lighting.

VISIBLE SPECTRUM

The visible spectrum is the portion of the electromagnetic spectrum that is visible to the human eye and is measured in nanometres (nm).

INGRESS PROTECTION (IP) RATING INDEX

0	No protection	0	No protection
1	Protected against solid objects >50mm (e.g. hands)	1	Protected against vertically falling drops of water
2	Protected against solid objects >12mm (e.g. fingers)	2	Protected against drops of water falling from up to 15°
3	Protected against solid objects >2.5mm (e.g. tools)	3	Protected against drops of water falling from up to 60°
4	Protected against solid objects >1mm (e.g. wires)	4	Protected against sprays from all directions
5	Protected against dust (limited ingress)	5	Protected against jets of water from all directions
6	Totally protected against dust	6	Protected against strong jets of water from all directions
		7	Protected against immersion from 15cm–1m for 30 min.
		8	Protected for long periods of immersion under pressure

COB

The latest leading-edge technology, COB 'Chip on Board' LED ribbon uses small LED chips mounted directly onto a PCB with a single line of phosphor to provide dot-free continuous illumination.

CRI >90, and available in IP20 interior & IP66 exterior options and in wattages of 6, 9 and 12W/m. There are also options available for Tuneable White, RGB & RGBW.

STANDARD

Our original range of interior LED ribbon in 4, 9, 13, 17 & 18W/m with various lumen packages and colour temperatures for a wide range of interior residential and commercial projects.

PROSERIES

PROSERIES

ProSeries is a professional linear LED product for architectural and commercial lighting projects. Made for high-performance, ProSeries is available in 6, 12, 18, & 30 Watts offering a range of lumen packages perfect for any lighting application.

The superior quality of ProSeries all starts with the chip. Using a high CRI Edison Opto LED with a 2-step MacAdam ellipse, & from a single bin ensures greater colour consistency & brilliant results.

ENCAPSULATED

A durable, fully enclosed IP66 product that meets the requirements of exterior projects. CRI >80, and available in 3000K warm white or 4000K natural white, as well as the RGB curve model.

Models bend horizontally, vertically or in both directions, providing a variety of lighting options for greater flexibility in design.

- Aluminium profile as part of the installation is required for thermal management
 - Not suitable for use with shallow profile models: Baseline 01 Mini, Lowline 01 Mini or Lowline 02 Mini
 - The IP65 version is suitable for use in kitchens, bathrooms and with appropriate protection can also be used in some sheltered outdoor applications.

COLOUR CHANGING RIBBON

Adding a touch of colour can make spaces pop, create mood or excitement in any application.

Tuneable White allows users to adjust lighting to suit the environment and time of day. Warmer temperatures create a cozy feel that is perfect for evenings, while cooler temperatures simulate day light, creating a more alert feel.

RGB (Red, Green, Blue) ribbon provides a rainbow of colour options from hot pinks to vivid blues and anywhere in-between.

RGB White (Red, Green, Blue, and White) ribbon provides the most options. This product has a dedicated chip to produce the white light, typically 3000K warm white. This can be used independently of the colour chip or in combination to create soft pastel effects.

In our range we have 'RGBW | High Performance Dual Chip' (pg 32) which utilizes a completely independent 3000K warm white, CRI ≥ 90 chip providing a bright 1080lm/m light that rivals the performance of the traditional standard white ribbons, giving you the best of both!

Indoor multi-functional space? Future proof your lighting design by choosing the RGBW High Performance Dual Chip.

We also have IP66 exterior use versions in RGB and RGBW (pgs 40-41).

ENCAPSULATED LED RIBBON

Encapsulated LED Ribbon is perfect for cove lighting, toe kicks & architectural features in both residential and commercial applications.

With a small bend radius Encapsulated LED Ribbon is ideal for small letters or those tight corners.

Available in warm white or natural white, as well as CURVE model RGB option.

Our LITE & CURVE models bend horizontally, SHEER bends vertically and DUO bends in both directions, providing a variety of lighting options for greater flexibility in designs.

BRIGHT LIGHT LINEAR PROFILE

Our Linear LED aluminium profile is an all-purpose range of New Zealand designed and engineered, high performance systems. From suspended luminaires through to surface mounted and recessed task lighting, The range provides options for all levels of lighting requirements, from residential homes to large-scale commercial fit-outs.

The perpetual refining of technology across this range has led to the development of features such as a 'soft leg' diffuser, friction-fit recessing, various mounting-clip systems, and a self-countersinking solution for Baseline 01 making on-site installs an absolute breeze.

Nearly all the profiles are available with anodised aluminium and black or white powder-coat finishes as standard and custom colours can also be arranged.

All profiles use quality 6060 grade aluminium, providing highly effective thermal management for your installation. All of the polycarbonate diffusers in the range are UV stable and many options utilise our rolled opal and prismatic diffusers making a high visual performance possible in every scenario.

THERMAL & VISUAL PERFORMANCE

The below chart is intended as a guide only. Specific applications and installations may allow for more options. Chart based on IP20 ribbon. IP65 or IP66 versions will have different dimensions and may not fit in the same profiles. Refer to specific product pages.

🔥 THERMAL MANAGEMENT

Suitable for thermal management

Aluminium profile is a good way of transferring heat away from LED ribbon strip. Smaller profiles, particularly when recessed transfer less heat away from the LED. In these applications higher wattages of LED ribbon strip should be avoided to prevent overheating of the chips and components.

👁️ GOOD VISUAL PERFORMANCE

Recommended for glare management and/or to prevent LED dotting. Indications are based on the size of the profile model, diffuser material, shape, and level of light diffusion; and the wattage and features of the specific LED ribbon. This includes considerations such as:

- Profiles where the diffuser is close to the LED ribbon could cause visual dotting, the use of COB ribbon is recommended to prevent this.
- Narrow aperture and 'U' shaped diffusers will have a higher glare perception
- Semi-recessed diffusers will have a lower glare perception
- Indirect lighting will not require glare management and (provided thermally safe) can have higher wattages
- Where prismatic diffuser is available higher wattage ribbons can be considered due to improved glare management

BASELINE 01

FEATURES

- W20 × H15mm
- Prismatic diamond-cut or opal diffuser (continuous up to 50m - by request)
- Anodised aluminium, black or white powder-coat finishes
- Self-countersinking screw design
- Surface or recess mount
- Provides thermal management for LED ribbon up to a maximum of Pro 18 or equivalent
- For best visual performance, LED ribbon up to a maximum of Pro 12 or equivalent is recommended for glare management

DIMENSIONS

INSTALLATION

SEE INSTALLATION GUIDE FOR DETAILED INSTRUCTIONS.

When recessed with mounting clips, Highline 03 requires a cut out of 56-65mm. Mounting clips suitable for up to 15mm ceiling.

SCREW-FIT INSTALLATION

WHEN USED, CLIPS ARE RECOMMENDED WITHIN 100MM OF EACH END & EVENLY SPACED ALONG LENGTH. MAXIMUM DISTANCE OF 1M BETWEEN CLIPS.

HIGHLINE 04

FEATURES

- Vandal-resistant opal acrylic diffuser (W31 × H6.3 × L2000mm)
- Anodised aluminium, black, or white powder-coat
- Surface mount
- General and task lighting
- Provides thermal management for LED ribbon up to a maximum of Pro 30 or equivalent.

LUMINAIRE

HIGHLINE 05 CUSTOM-BUILDS CAN BE PRODUCED IN BESPOKE SHAPES & CREATIVE DESIGNS TO SUIT YOUR SPACE

ANY
LENGTH

CREATIVE
SHAPES

CUSTOM
COLOUR
FINISHES

EXTRA
MOUNTING
OPTIONS

USING THE SAME COMPONENTS AS OUR HIGHLINE 05, CUSTOM-BUILD ALLOWS FOR MORE OPTIONS:

- Creative shapes such as squares, crosses, or even hexagons
- Any length can be possible, using joiners. Our rolled prismatic diffuser can give up to 50 metres of seamless diffusion!
- Extra mounting options such as rod suspension or wall mounting
- Custom colour finishes are available in a range of powder-coat colours and anodising options.

ALL CUSTOM-BUILDS HAVE EXTERNAL DRIVERS

FLARE 33

FINISH	CODE
ANODISED	FLARE.33A
BLACK	FLARE.33B
WHITE	FLARE.33W

FEATURES

- W70mm x H33mm (with 10mm trim)
- Flush mounted satin opal polycarbonate diffuser
- Anodised aluminium, black, or white powder-coat
- Recess via mounting clip or screw-fix

FLARE 33 is a large-scale product, designed for recessed applications. It can be screw fixed or mounted via a mounting clip system for easy installation.

Similar to its counterpart Highline 03, FLARE 33 offers a flush opal diffuser, perfect for residential and commercial lighting projects. The stylish trim allows for a forgiving installation ensuring a clean finish.

This product provides thermal management for LED ribbon up to a maximum of Pro 30 or equivalent.

For best visual performance, LED ribbon up to a maximum of Pro 12 or equivalent is recommended for glare management.

INSTALLATION

SEE INSTALLATION GUIDE FOR DETAILED NSTRUCTIONS.
 When recessed with mounting clips requires cut out of 55-65mm, suitable for up to 15mm ceiling.

ECLIPSE 24 | DARK TO LIGHT DIFFUSER

FINISH

CODE

BLACK

ECLIPSE.24B

PROFILE IS BLACK AS STANDARD TO MATCH WITH DIFFUSER, BUT IS ALSO AVAILABLE IN SILVER OR WHITE FOR CONTRAST.

FEATURES

- W18.5 × H24mm (up to 4 metre lengths with joiners available)
- Dark to light PMMA diffuser
- Black powder-coat finish (profile can also be silver or white)
- Suspend, surface mount, or recess

ECLIPSE 24 is an inconspicuous lighting profile specifically designed to be camouflaged when not in use. When unpowered ECLIPSE 24 has the appearance of a solid black profile or stylish trim, if recessed.

When powered up the diffuser comes to life to provide a striking line of light. ECLIPSE 24 can be suspended, surface mounted, or recessed.

This product provides thermal management for LED ribbon up to a maximum of Pro 30 or equivalent.

Light transmission through the black diffuser is about 20–30%, therefore, higher wattage LED ribbon is recommended. For a brilliant white result use 5000–6000K LED ribbon, or alternatively, 3000K and 4000K options are also available.

WHITE	HORIZON.105W

CUSTOM-BUILT TO LENGTH!

FEATURES

- W18.5mm x H104.87mm
- Custom-built to lengths up to 4metres, or longer via joiners
- Rectangle frosted acrylic diffuser for down lighting and opal polycarbonate diffuser for up lighting
- Anodised aluminium, black, or white powder-coat
- Custom colour finishes available
- Suspend mount

HORIZON 105 is a sleek and stylish suspended profile that provides both down lighting and optional up lighting.

Using a rectangle diffuser HORIZON 105 is designed to be seen and provides 180 degree illumination. It is perfect as architectural feature lighting for both residential and commercial lighting projects.

This product provides thermal management for LED ribbon up to a maximum of Pro 30 or equivalent.

For best direct light visual performance, LED ribbon up to a maximum of Pro 12 or equivalent is recommended for glare management.

Indirect lighting will not require glare management and (providing thermally safe) can have higher wattage products

- Custom-built to lengths up to 4metres, or longer via joiners
- Rectangle frosted acrylic diffusers for down lighting and satin opal polycarbonate diffuser for up lighting
- Anodised aluminium, black, or white powder-coat
- Custom colour finishes available
- Optional down light units available
- Suspend mount

STORM 37 is a sophisticated, suspended luminaire system that is perfect as an architectural feature or in general applications. A sleek, high powered solution with multiple lighting options, STORM is suitable for both residential and commercial lighting projects.

STORM 37 is designed with down lighting, optional up lighting and additional down light units available for situations where glare-free illumination is vital.

This product provides thermal management for LED ribbon up to a maximum of Pro 30 or equivalent.

For best direct light visual performance, LED ribbon up to a maximum of Pro 12 or equivalent is recommended for glare management.

Indirect lighting will not require glare management and (providing thermally safe) can have higher wattage products

CONTROL

Bright Light have a wide range of LTECH and Italian made Nexta-Tech controllers & receivers for dimming and control of single colour, Tuneable white, RGB and RGBW LED ribbon. From sleek user interface touch remotes, to the powerful control units behind the scenes – there's a solution for every installation. Talk to our team about your project.

INDEPENDENT CONTROL

Options for hand held or wall mounted, wireless or wired controllers with various colour modes & functions.

FOR THE FULL RANGE VISIT: WWW.BRIGHTLIGHT.CO.NZ/COLLECTIONS/CONTROL

CONTROLLERS & DIMMERS

Compatible options for a wide range of lighting control systems. Talk to our team for the best solution for your project.

DALI

SPI

CASAMBI

Italian made Nexta-Tech control gear is a top of the line range, specializing in the development and production of professional wireless systems for lighting control.

An industry staple, LTECH control gear has a huge range of options.

PLANO-ONE. A LITTLE BOX WITH BIG DREAMS.

- Universal control unit for constant voltage LED Ribbon
- Use phone app for control
- 12-24V DC
- Control single colour, CCT, RGB and RGBW
- RF, wired and OneSmart WiFi control

NEXA-TECH

CONTROL GEAR OVERVIEW

This overview gives information about types of dimming and the function of different control gear. It is only to be used as a guide as different brands and types of control gear may operate differently. Bright Light recommend discussing your project with one of our team to ensure you get the desired result.

CONTROLLER

These can be handheld remotes or hardwired controllers which control LED dimming or light colour. User control remotes are wireless and can be physical remotes or in some cases an app on your phone, both of these will require a wireless receiver. Hardwired controllers can generally connect directly to the LED ribbon.

Zones: Some remotes offer a set number of zones. These can be useful as they allow unique dimming/light colours to be set for different areas (receiver & LED installations). It's important to know what options you'll require for an installation to ensure you get the right gear.

WIRELESS RECEIVER

A wireless receiver takes instructions from a remote or software and converts them into electrical signals to control LED ribbon. For multiple LED installations you may require multiple repeaters or wireless receivers.

When used in place of repeaters, these can perform the same function without the need for a signal wire. They are perfect for installations where a signal wire connection is not possible due to barriers or where there is no place to hide wires. Each separate LED ribbon installation will require a receiver and power supply.

Wireless installations can have limitations too - depending on the selected user control. Remotes will have a maximum distance from the receivers (generally between 30-40metres), and this can be affected by solid physical objects such as walls blocking the path. Some simple remotes are designed for single installations and only pair with one receiver.

REPEATER

These repeat the signal from a receiver / hardwired controller via a signal wire to multiple LED ribbon installations. As the signal is repeated and boosted by each repeater along the way this setup can extend a single receiver / hardwired controller range almost indefinitely.

This allows for the simultaneous dimming and/or colour changing of separate LED ribbon installations within the same space, provided the signal wire can reach all installations. Each separate LED ribbon installation requires a repeater and power supply.

The limitation of repeaters is they require a signal wire connecting them to the main controller, if physical barriers prevent this, consider using wireless receivers instead.

PRIMARY VS SECONDARY DIMMING

SECONDARY DIMMING

Secondary dimming is where the dimmer/controller (with remote), is on the low voltage side of the power supply after the voltage has been stepped down to 24V or 12V DC.

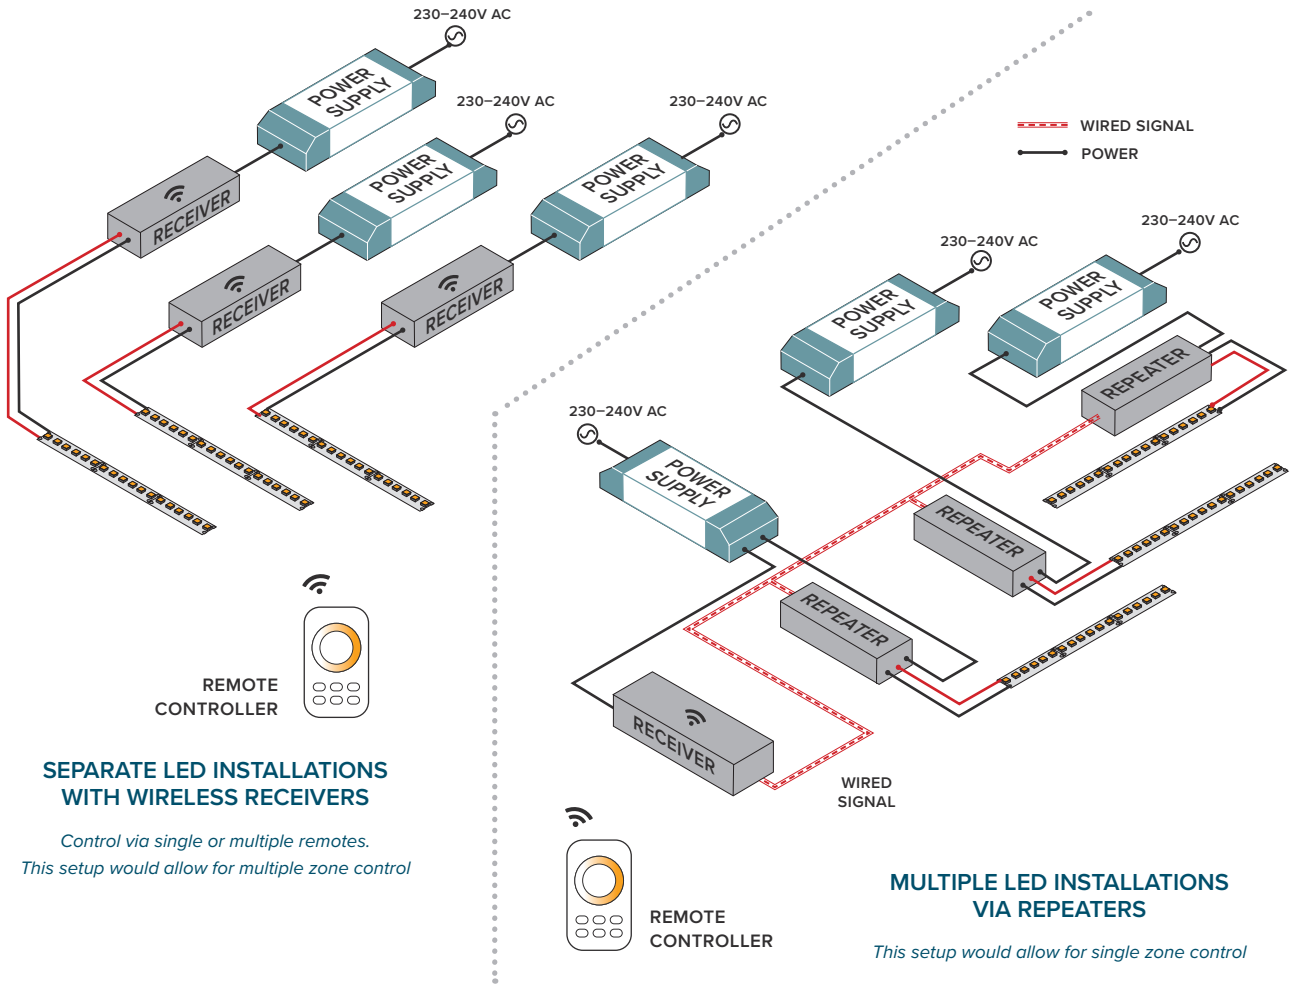

Bright Light's dimmer/controls (with remote) are all secondary and the majority of Bright Light power supplies are designed for secondary dimming.

PRIMARY DIMMING

Primary dimming is where the dimmer is on the high voltage side of the power supply. For this a TRIAC dimmable power supply is required.

REMOTE CONTROL INSTALLATION

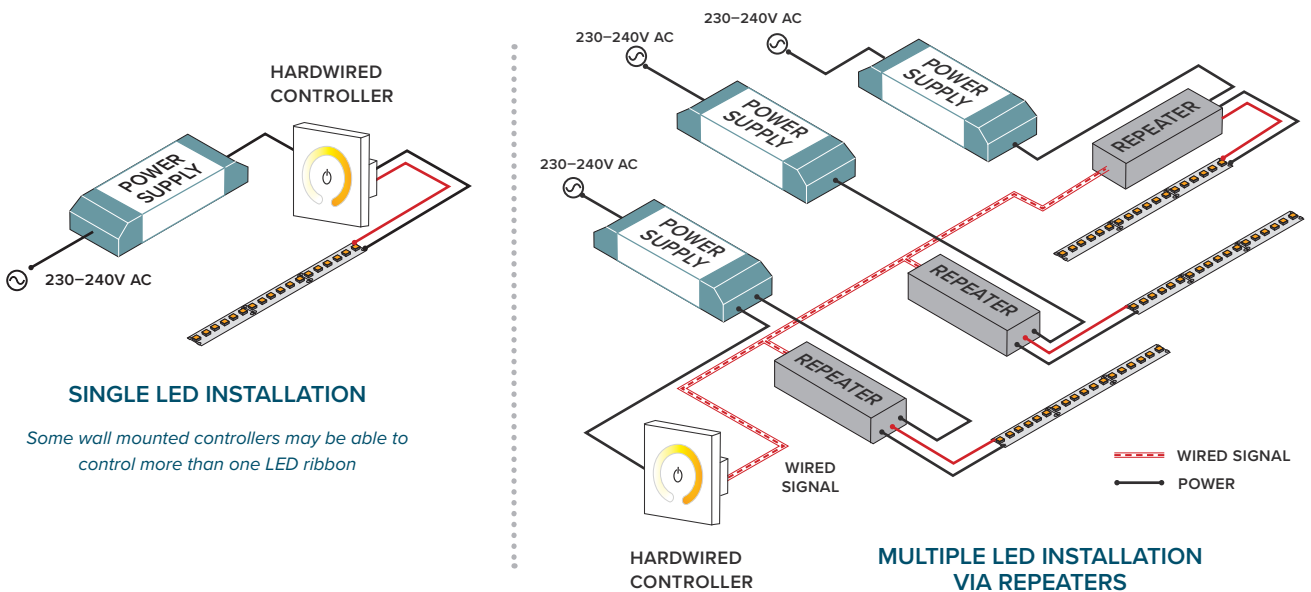

SEPARATE LED INSTALLATIONS WITH WIRELESS RECEIVERS

Control via single or multiple remotes.
This setup would allow for multiple zone control

MULTIPLE LED INSTALLATIONS VIA REPEATERS

This setup would allow for single zone control

HARDWIRED CONTROLLER INSTALLATION

SINGLE LED INSTALLATION

Some wall mounted controllers may be able to control more than one LED ribbon

MULTIPLE LED INSTALLATION VIA REPEATERS
