

Husqvarna ELITE-GRIND EZ SHARXX

EZchange™ tool system features a 13 mm high segment, designed for grinding extremely hard concrete floors with a hardness level ranging from 8 to 10 on Mohs hardness scale. Elite-Grind EZ Sharxx features a unique soft metallic bond that ensures the diamonds remain exposed, allowing for effective penetration and opening of even the toughest concrete surfaces. This innovative design enables efficient material removal and precise grinding, making it the ideal choice for tackling extremely hard concrete floor applications.

More active diamonds

Exclusive Husqvarna segment shape for more active diamonds.

Excellent working speed and tool life by dry grinding

We recommend dry use of the tools. This extends the life of the tools and decreases working hours, as no valuable time is wasted on cleaning up slurry after the passes. Wet grinding is still possible.

Concrete grinding

Concrete grinding

Optimal removal rate

More active diamonds thanks to the hexagonal shape. These deliver an optimal removal rate.

FEATURES

- Concrete grinding
- We recommend dry use of the tools. This extends the life of the tools and decreases working hours, as no valuable time is wasted on cleaning up slurry after the passes. Wet grinding is still possible.
- Exclusive Husqvarna segment shape for more active diamonds.
- More active diamonds thanks to the hexagonal shape. These deliver an optimal removal rate.
- Easy and quick set-up of tools
