HGH Fragment 176-191 is a small, synthetic piece of natural human growth hormone (hGH). It is often referred to as the "lipolytic fragment" for its ability to boost fat loss. It has been shown to help lower blood sugar levels and promote cartilage healing without increasing long bone growth, increasing IGF-1 levels, or altering insulin sensitivity. The (hGH Fragment 176-191) exhibits the ability to burn through stubborn adipose tissue, while increasing energy expenditure, muscle mass, and fat oxidation. All studies have pointed to the fact that the fragment is an effective treatment for obesity and fat loss, and much safer than its Human Growth Hormone counterpart.
