You can see how you compare to men with the lowest and highest T levels. According to this chart, my beginning T level (383 ng/dl) was near the bottom 5% and 10% across all age groups. Even for 55-59-year-old men. My testosterone level after 90 days of good living (778 ng/dl), was above average for my age group. -Testosterone Undecanoate: 750 mg (3 mL) IM injection followed by 750 mg (3 mL) injected after 4 weeks, then 750 mg (3 mL) every 10 weeks thereafter-Testosterone Enanthate and Cypionate: 50 to 400 mg IM injection every 2 to 4 weeks IMPLANT:-2 to 6 pellets (75 mg each) implanted subcutaneously every 3 to 6 months. 500 mg is more than enough for a first cycle, granted you run it 12-16 weeks. All depends how you react to it though. In terms of side effects 500 mg of test really shouldn't give you too many side effects, unless you are a high converter and need some form of AI to run alongside. 7.2 - 24.0 pg/mL. 170 - 918 ng/dL. 400 - 450 ng/dL. Over 60. 6.6 - 18.1 pg/mL. 156 - 700 ng/dL. 300 - 350 ng/dL. What is considered normal testosterone levels in men by age varies considerably, as shown above. A man in his early fifties who falls at the low end of the average range will most likely be experiencing many of the ... <https://esc16.instructure.com/courses/1536/pages/eurotropin-hgh-191aa-etc-saizen-obat-apa>
