

RECIPE - 30CL WHITE CHRISTMAS IN 464

# CANDLE SHACK

# DESCRIPTION

### **INGREDIENTS FOR EACH CANDLE**

| <u>1x 30cl Glass Jar</u>               |       | 1.    |
|----------------------------------------|-------|-------|
| 17,6g of White Christmas Fragrance Oil | -     |       |
| 202,4g of Golden Wax 464               | · * * |       |
| 1x Stabilo16 Wick                      | 1.1.1 |       |
| 1x 15mm Adhesive Wick Pad              | 1     | 3 · M |
| 1x Three Jar Wick Centering Tool       |       |       |
|                                        |       |       |

### WAX

Made by global wax giant AAK under the Golden Wax brand, GW464 remains the most popular soy container wax on the market. It offers a good hot and cold scent throw as well as excellent glass adhesion and is produced under rigorous ethical and environmental standards.

# VESSEL

Our Lotti 30cl glass is manufactured in Italy and meets the highest standards of clarity and tolerance. Height: 90mm Diameter: 78mm Internal height: 75mm

# WICK

Stabilo candle wicks are one of the best and brightest wicks for home and professional scented candles alike. They are coreless, non-directional flat-braided wicks with a special paper filament woven around them. With their unique configuration, they enable consistent capillary action while ensuring a wick-trimming flame posture. All wicks are 110mm long with a thin paraffin coating for stability.

# **USAGE RECOMMENDATIONS**

- We recommend working at an ambient temperature of 18 to 25°C.
- We recommend heating 464 to 70-75°C to melt.
- Add the fragrance at 60°C and stir for 60 seconds.
- The mixture is ready to pour at 55-60°C into glasses at room temperature (18-20°C).
- If the top is uneven once set, you can flash the surface with a heat gun.
- Leave the candle to cure for at least 2 days at 20°C for the best results.

# DISCLAIMER

Each report shows test results for a set of candles made by Candle Shack's R&D team for that particular recipe. The test reports are not a guarantee that all candles made to the recipe will burn in exactly the same way. Variables such as ambient temperature, air flow, or the manufacturing process can affect the burning profile of a candle, so it is recommended that candle makers conduct their own testing to ensure that they are satisfied with the performance of their product.

Candleshack Ltd, Unit A, West Carron Works, Stenhouse Road, Carron, Stirlingshire, FK2 8DR

Technical report on a test set of candles made in Candle Shack R&D department for sooting behaviour testing and fire safety testing

Date of Report: 23/10/23

Testing Period: 26/09/2023 - 15/10/2023

#### **TECHNICAL REPORT**

#### Part 1: SPECIFICATION FOR SOOTING BEHAVIOUR

To evaluate the performance of a test set of candles in a controlled environment against the requirements of BS EN 15426:2018 (Candles. Specification for sooting behaviour)

#### Part 2: SPECIFICATION FOR FIRE SAFETY

To evaluate the performance of a test set of candles in a controlled environment against the requirements of **BS EN 15493:2019** (Candles. Specification for fire safety)

#### Part 1: SPECIFICATION FOR SOOTING BEHAVIOUR

#### Requirement

When tested in accordance with clause 9 of EN 15426:2018, the average soot index per hour from three tests (samples) shall be less than 1.0/h

The room temperature during testing was 20±5°C

Wicks were trimmed to 5mm before lighting. Cycles:  $3 \times 240 \pm 5$  min cycles with >60min pause between cycles)

Soot testing was performed in wire mesh cylinder Type 2 (Diameter: 300 ± 10 mm)

| Sample Ref.  | Total burn time $t_{\rm m}$ (h) | Hourly soot index<br>Si <sub>h</sub> | Average soot index<br>per hour Si <sub>h</sub> | Result |
