RECIPE - 9CL

BLACK FIG & VETIVER IN RCX

CANDLE SHACK

DESCRIPTION

BLACK FIG AND VETIVER

TOP NOTES - ANISE,
GREEN LEAF, CITRUS FRUITS

HEART NOTES - COCONUT,
CEDAR, VIOLET

BASE NOTES - OAKMOSS,
TONKA, AMBER

INGREDIENTS FOR EACH CANDLE

1x 9cl glass jar
7.5g of Black Fig and Vetiver Fragrance Oil
67.5g Candle Shack Ecosystem RCX
1x V6 Wick
1x 15mm Adhesive Wick Pad
1x WickClaw Tool for 9cl Glass

WAX

Candle Shack's EcoSystem Rapeseed & Coconut (RCX) is a natural wax blend. It was developed in Europe exclusively for Candle Shack and is made from rapeseed and coconut oil... and nothing else! It is free from paraffin, soy, palm, beeswax and synthetic additives.

VESSEL

Our Lauren 9cl Votive glass is manufactured in Italy and meets the highest standards of clarity and tolerance.

Height: 67mm

Diameter: 56mm

Internal height: 57mm

WICK

Highly engineered Wedo V candle wicks can handle complex perfumes and dyes thanks to their core-less construction. The ring-spun cotton threads with a metal powder help reduce and even eliminate carbon deposit formation or wick disintegration. All wicks are 110mm long with a thin paraffin wax coating for stability.

USAGE RECOMMENDATIONS

- We recommend heating RCX to 60°C to melt.
- Add the fragrance at 60°C and stir for 60 seconds.
- The mixture is ready to pour at 38°C into glasses at room-temperature.
- If the top is uneven once set, you can flash the surface with a heat gun or do a top-up pour to get a clean finish.
- Leave the candle to cure for at least 2 days for the best results.

DISCLAIMER

Each report shows test results for a set of candles made by Candle Shack's R&D team for that particular recipe. The test reports are not a guarantee that all candles made to the recipe will burn in exactly the same way. Variables such as ambient temperature, air flow, or the manufacturing process can affect the burning profile of a candle, so it is recommended that candle makers conduct their own testing to ensure that they are satisfied with the performance of their product.
