

HOW TO MIX FOAM PARTY SUPPLIES POWDER FOAM SOLUTION

THINGS THAT YOU'LL NEED:

30-Gallon or 55- Gallon
Container

1-Pack of Foam Powder

Drill or Hand Mixer

WHAT TO DO:

Step 1: Gather your materials. Depending on the Foam Powder you purchased you'll need either a 30 (Small Bag) or 55 Gallon (Large Bag) Container.

Step 2: Fill your container with clean water.

Step 3: Open your bag of Foam Powder and dump it into your container of water. It's best to hold the powder close to the water surface to reduce the powder particles floating in the air.

Step 4: Mix your Foam Powder and Water until the Powder is fully dissolved.

Step 5: Let the powder rest 10 minutes before use.

Congratulations you're now ready to get your foam party started!
