

Clear Poly Greenhouse Film for Poly Low Tunnels

Product Overview:

Our Clear Poly greenhouse film is designed to work with the Kwik Hoops® system to protect crops in the shoulder seasons and winter. It's made of high-quality UV-stabilized 6-mil greenhouse plastic, developed to last for several years.

These poly-low tunnels will require venting in full sun to prevent overheating. Thankfully, this task is quick and efficient with the Kwik Hoops® system.

This material is impermeable to water. A drip irrigation system will be required for contexts where irrigation is needed.

Standard rolls are 120 feet long to accommodate both 100-foot and 50-foot bed systems. A grower using a 50-foot-long bed system would cut the roll in half and still have five feet of extra material on each side of the bed to close the low tunnel's ends. Growers using a 100-foot bed system will likely want to trim the excess length.

Uses:

- Protection from snow, wind, and rain
- Protection from frost
- Increase in temperature during the cold seasons
- Protection from birds
- Protection from animals

Specifications:

- 70 inches x 120 feet (1.78m x 36.5m)
- 6 mil (0.15mm thick)
- Material: Polyolefin
- Light transmittance >90%
- Anti-drip, anti-aging, anti-fog coating
