

The images below are of a first test without and with the vita chip

This image was taken after 30 minutes of cell-phone use without the vita chip. It shows the clumping of red-blood cells which could be the cause of the above described problems. This symptom of blood clotting would impact the performance of the subject.

This image was taken after 30 minutes of cell-phone use with the vita chip, as can be seen the clumping of red-blood cells is drastically reduced. This could have the result that the person is going to see relieve from the above mentioned symptoms.

Age 39

Discomfort: Tiredness and headaches

Workstation: Computer with 8 screens

Impression: The pilot is suffering from great stress

After 2 months of the vita chip

- The experimenter has recovered from stress
- The headaches have disappeared to 80%
- The fatigue has shifted and still leaves Close problems with digestion
The experimenter has decided to make further clarifications with us

After 6 months of the vita chip

- The experimenter has fully recovered
- A health check At the doctor gave no indication of further problems
