

Azelaic 20 pH 4

Azelaic acid is a naturally occurring dicarboxylic acid found in grains such as barley, wheat, and rye. It's a gentle, anti-inflammatory treatment that can be compared to an active toner.

The Azelaic 20 is a leave-on treatment that gently encourages cell turnover, reduces inflammation, and suppresses melanin synthesis, leading to a brighter complexion.

INDICATIONS

Suitable for all skin types

- Antibacterial properties and its anti-inflammatory qualities make it an effective treatment for treating acne, and symptoms of Rosacea
- Reduces hyperpigmentation associated with acne scarring and sun damage
- Treats and prevents ingrown hairs

PROTOCOL

- Apply one layer at the end of the facial as a toner before applying serums and moisturizer.
- Can also be used after waxing to prevent ingrown hairs.

AFTERCARE

This product does cause sensitivity to the sun, so an SPF is always recommended.

CONTRAINDICATIONS

- Open sores and abrasions
- Sunburn
